This report is presented in an electronic version only.

## EXECUTIVE SUMMARY

Draper Aden Associates (DAA) was contracted by the Town of Pulaski, Virginia, under a United States Environmental Protection Agency (USEPA) Brownfields Assessment Grant, to perform a Phase I Environmental Site Assessment (ESA) for the subject property, commonly known as the former Calfee School, located at 1 Magnox Drive in Pulaski, Virginia. The Town of Pulaski requested the Phase I ESA on behalf of the Owner, the Town of Pulaski Redevelopment and Housing Authority (PRHA) and the Calfee Community & Cultural Center (CCCC). The CCCC intends to receive ownership of the site through donation by the Town. DAA performed the Phase I ESA in general accordance with the scope and limitations of the ASTM International (ASTM) Practice E1527-13 and the USEPA All Appropriate Inquiry (AAI) Rule in an effort to identify recognized environmental conditions (RECs) as defined by the ASTM standard. An asbestos containing materials (ACM) and lead-based paint (LBP) survey was excluded with this assessment; however, PRHA provided assessments are provided in Appendix D.

The subject property was undeveloped prior to the Calfee School's construction in 1939. The former school operated from 1939-1966. Reportedly, after sitting vacant, the County leased the building to Social Services and Head Start programs. In 1989, the property was purchased by a nearby industrial facility for use as office space. Site use by West Main Manufacturing during 1990-2005 is unknown. Reportedly the building has been vacant since at least 2010.

The property has been located within an area of historical manufacturing/industrial use. Most notably, the former NanoChemonics/Magnox facility, located approximately 121 feet from the site. This facility formerly manufactured nanoparticle iron oxides for various industries; the company ceased operations in July 2010 and an EPA-approved Response Action Plan was implemented from April 2011 through August 2016 to remove hazardous substances and polychlorinated biphenyls (PCBs) remaining at the site following demolition of the on-site structures and buildings.

Upon review of the environmental regulatory database report, no sites were identified for the subject property or the adjoining property. However, the report listed multiple sites within the

standard search radius. However, based on available information at this this time, the sites are not anticipated to pose an environmental risk to the subject site.

According to U.S. Federal Emergency Management Agency (FEMA) mapping, the subject property is located within the 100-year floodplain. Discharges into Peak Creek from nearby industrial activities on both sides of Peak Creek and its nearby tributaries have the potential to mobilize contaminants and impact the subject property, during flooding.

No evidence of a release or obvious impact to the subject property was observed during the site reconnaissance conducted on February 23, 2021. No documented releases to the subject property were found as part of the regulatory database search.

This assessment has revealed no evidence of recognized environmental conditions (REC) in connection with the property except for: asbestos and lead containing materials.

It is our understanding that drinking water for the subject site and surrounding area is supplied by the Town of Pulaski.

A finding of RECs does not imply that impact actually exists, but that more information may be warranted. Further discussion regarding RECs, historical RECs, areas of concern and *de minimis* conditions, data gaps, and associated findings and opinions is provided in the body of the report.

## 1.0 INTRODUCTION

The Town of Pulaski (USER) contracted Draper Aden Associates, under a United States Environmental Protection Agency (USEPA) Brownfields Assessment Grant, to perform a Phase I Environmental Site Assessment (ESA) for the subject property, commonly known as the former Calfee School site, tax parcel: 72-14-1 located at 1 Magnox Drive in Pulaski, Virginia. The Phase I ESA was requested by PRHA (USER), who desires to redevelop the subject property and the Calfee Community & Cultural Center (CCCC). The CCCC intends to receive ownership of the site through donation by the Town.

Draper Aden Associates performed this Phase I ESA in general accordance with the scope and limitations of the ASTM E1527-13: *Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process* and the USEPA AAI Rule. The Phase I ESA included site reconnaissance conducted on February 23, 2021, interviews with the present and former property owners and local government officials, and review of practicably reviewable and reasonably ascertainable historical records and records of local, state and federal regulatory agencies, unless otherwise noted. An additional Virginia Department of Environmental Quality (VDEQ) file review was conducted as part of this assessment. A lead-based paint (LBP) and asbestos containing materials (ACM) survey was not completed as part of this Phase I ESA effort; however, the Owner provided recent surveys which are incorporated into this report.

The subject property, adjoining and surrounding properties are depicted in Figures 1 and 2. Appendix A includes site photographs at the time of the site reconnaissance. Appendix B includes historical records review documentation. Appendix C includes regulatory review and physical setting documentation. Appendix D presents the results of property owner provided lead-based paint and asbestos containing materials surveys. Appendix E presents qualifications of the project environmental professionals. A review for controlled substances as defined in Section 1.2 of the ASTM was not conducted. The results of the Phase I ESA are provided below.

## 1.1 Purpose

A Phase I ESA is intended to identify recognized environmental conditions (RECs) on a site, as defined in Section 3.2.78 of the ASTM standard, from review of practically reviewable and reasonably ascertainable information about the site, including a site reconnaissance, to satisfy one of the requirements to qualify for the landowner liability protections, that being the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" (42 USC §9601(35)(B)) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). The term REC means the presence or likely presence of hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment, (2) under conditions indicative of a release to the environment, or (3) under conditions that pose a material threat of a future release to the environment. If RECs are identified, the Phase I ESA report may indicate what additional activity is warranted to further evaluate the environmental conditions. Additionally, the Town of Pulaski, a USEPA Assessment Grant recipient, and the property owner PRHA, (Users), aim to use the results of the Phase I ESA to facilitate transfer and redevelopment of the property. The Calfee Community & Cultural Center (User) intends to receive the property as a donation for redevelopment.

Draper Aden Associates prepared this document in accordance with generally accepted standards of environmental practice, and in general accordance with the scope and limitations of the ASTM standard. The conclusions presented in this report are professional opinions based on data described in this report, and are intended only for the purpose, site location, and project indicated. The conclusions presented in this report are based on the assumption that site conditions do not deviate from those observed during the study and described in this report.

This report is not an exhaustive study of potential environmental impact at the subject property and should not be interpreted as such. An evaluation of subsurface soil and groundwater conditions, radon, lead based paint, asbestos, wetlands assessment, vapor intrusion survey, historical building assessment or other evaluation of environmental issues considered business

environmental risk as defined by ASTM were not performed as part of this assessment, unless indicated. An environmental lien search was not included in the scope of services.

A vapor intrusion survey was outside the scope of services; however, Draper Aden Associates considered the potential for vapor encroachment as part of this assessment. A vapor encroachment condition (VEC) is the presence or likely presence of chemical(s) of concern (COC) vapors in the subsurface of a target property caused by the release of vapors from impacted soil or groundwater either on or near the subject property. COCs include those listed in the ASTM standard that are present in the subsurface environment and can potentially migrate as a vapor into the subsurface of the target property (e.g., petroleum compounds); however, COCs do not include naturally occurring gases such as radon associated with certain types of subsurface geology.

The results of this assessment represent a review of current conditions based on practicably reviewable and reasonably ascertainable information and limited observations. Exceptions to, or deletions from, this practice are described in Section 8.0 of this report. A finding of RECs does not imply that impact actually exists, but that more information may be warranted.

## **2.0 PROPERTY DESCRIPTION**

### **2.1 Location, Legal Description**

The subject property is located at 1 Magnox Drive (Tax Parcel 72-14-1) in the Town of Pulaski, Virginia. The site comprises approximately 2.05-acres (per Pulaski County GIS) and is presented on the Site Location Map, Figure 1.

### **2.2 Site and Vicinity Characteristics**

The Town of Pulaski is located along I-81 approximately 18 miles west-southwest from the Town of Christiansburg, Virginia. The subject property is located within the Town corporate limits, approximately 0.25-miles west of historic downtown Pulaski. The site is located within a mixed-use area of development that includes residential, commercial, and industrial properties. The site comprises a former school building situated on a triangle shaped parcel. Most of the site is developed and includes a parking area. The site and surrounding residential, commercial, and industrial properties are located near Tract Fork and Peak Creek. A Site Detail Map is presented as Figure 2.

### **2.3 Current Use of the Property**

The former school and office building occupying the property is currently vacant. Reportedly, the property has been vacant since around 2010.

### **2.4 Description of Structures, Roads, Other Improvements on the Site**

The site is accessed via a driveway on the western side of the school that enters to an asphalt parking area. The asphalt parking area covers the western side of the property between Tract Fork and the school building. The brick school building was constructed in 1939 (82-years old) and covers much of the southern portion of the site. In an excerpt from a December 2020 DHR

Preliminary Information Form (PIF – 125-0034, Appendix B) prepared by the PRHA, the following information is provided:

“The gross square footage of this area is approximately 15,670 gross square feet (outside face of wall to outside face of wall). In 1990, Magnox Corporation renovated the Calfee Training School for use as an office space. At that time, the gym / cafeteria / multipurpose area was divided into two floors and used as storage and warehouse facility for Magnox. The entrance area to the building from the front door was enlarged, taking space from four classrooms and adding a built-in reception desk. No renovations have occurred since that time. A metal storage building (960 square feet) sits to the side of the building opposite of the creek and is assumed to have been constructed in 1990.”

The very northern tip of the property is undeveloped and is covered in shrubs and trees. The remainder of the developed area not covered in asphalt or buildings are kept as grassed lawn with exception of trees lining the banks of the former mill race (man-made water channel) that forms the east property line and Tract Fork which forms the west property line.

The subject property is serviced by public water, sewer, electricity, and natural gas. Sanborn maps indicate historical heat was by coal.

## **2.5 Current Uses of the Adjoining Properties and Surrounding Properties**

### ***Current Uses of Adjoining Properties***

The properties surrounding the subject property consist of undeveloped parcels, an automotive service shop and residential homes. The subject property is bordered to the north by residential properties. Tract Fork (stream) forms the western property boundary with vacant undeveloped property on the western bank of Tract Fork. Magnox Drive forms the southern property border. Beyond Magnox Drive lies the entrances to Johnson St., Beupel Place, a residential property and an automotive service center (Kirby's). The subject property's eastern border is defined by a former mill race that separates the property from residential properties on the eastern bank of

the channel. Additionally, there is an approximate 600 square foot, brick, water pumping station located at the southeastern corner of the subject property parcel as depicted on current Pulaski County GIS imagery. Reportedly this building has recently been carved out as a separate parcel that has not yet been reflected by Pulaski County GIS. The exact limits of the new parcel are unknown at this time. Figure 2 depicts select adjacent properties.

RECs associated with adjacent property use, if any, are identified in Section 7.0.

### ***Current Uses of Surrounding/Vicinity Properties***

Figure 2 depicts select surrounding/vicinity properties. The subject property is located approximately 0.25-miles south of historic Downtown Pulaski. Nearby vicinity properties are a mix of residential, commercial, and industrial. Nearby areas to the west, north, and east are mostly residential with industrial property located southwest and commercial use to the south and southeast. The vacant former NanoChemonics/Magnox industrial property is located approximately 121 feet southwest of the subject property. RECs associated with the current use of surrounding properties, if any, are identified in Section 7.0.

## **3.0 USER PROVIDED INFORMATION AND SITE DETAILS**

### **3.1 Ownership Record Review**

According to property records provided through Pulaski County GIS, the subject property was acquired by PRHA from STNP, LLC on July 25, 2019. (Deed Book 2019 Page 2296). Additional ownership history, which includes NanoChemonics Holdings, LLC, Magnox Acquisition, Inc., West Main Manufacturing, Inc., and Pulaski County, is provided on the GIS tax card located in Appendix B and discussed in Section 4.

On February 23, 2021, DAA personnel observed deeds for information regarding past ownership/uses at the Pulaski County Register of Deeds office in Pulaski, Virginia. Select deed information is presented in Appendix B. A title search is not intended or implied.

### **3.2 Environmental Liens or Activity and Land Use Limitations**

Draper Aden Associates did not perform an environmental lien search as part of this assessment. The owner did not indicate any environmental liens or use limitations for the site on the owner questionnaire (Appendix B).

### **3.3 Specialized Knowledge**

Ms. Darlene Burcham, Town Manager of Pulaski, Virginia and USEPA Brownfields Grantee Representative, represents a User. Ms. Burcham provided information related to the site as presented in the User Questionnaire (Appendix B).

Draper Aden Associates also conducted interviews with a local government official and with the potential owner/current key site manager (Section 6.0).

No other information was provided to Draper Aden Associates regarding specialized knowledge in connection with the subject property.

### **3.4 Commonly Known or Reasonably Ascertainable Information**

Except where noted, no additional information was provided to Draper Aden Associates regarding RECs in connection with the subject property.

### **3.5 Valuation Reduction for Environmental Issues**

Property value is based on current fair market value. The role of the Phase I ESA is to provide information regarding RECs that may be used in the determination of fair market value. There is the potential that discovery of historical environmental issues, conditions or liens, or other RECs during this Phase I ESA could affect the value of the property. The property is not currently for sale. The owner, as indicated on the User questionnaire (Appendix B) stated the property would be offered as a donation and therefore no purchase price was justified.

### **3.6 Owner, Occupant, Key Site Manager/Property Manager Information**

PRHA owns the subject property per Pulaski County GIS. The Calfee Community & Cultural Center (CCCC) is the current contractor of the Town and future owner/operator of the facility. Mrs. Jill Williams, Executive Director of CCCC, completed a Transaction Screen Questionnaire and provided access to the buildings on February 23, 2021.

### **3.7 Reason for Performing a Phase I Review**

Reasons for performing the Phase I ESA are as noted below.

- ◆ The site was selected as a recipient of a USEPA Brownfields Assessment Grant. The grant requires completion of a Phase I ESA.
- ◆ To facilitate sale and/or redevelopment of the property.
- ◆ To qualify for the landowner liability protections, that being the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" [42 USC §9601(35)(B) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)], if applicable.

The Town (User) requested the Phase I ESA on behalf of the Owner, PRHA. The Owner (User) intends to use the results of the Phase I ESA to facilitate redevelopment of the property as the Calfee Community & Cultural Center. The CCCC (User) intends to receive ownership of the site through donation by the Town.

## **4.0 RECORDS REVIEW**

### **4.1 Standard Environmental Review**

Draper Aden Associates contracted with Environmental Risk Information Services (ERIS) of Toronto, Ontario, to complete the regulatory database search and to assist parties seeking to meet the record search requirements of the ASTM standard. The ERIS findings are presented in Appendix C which include locations and explanations of database acronyms used in the sections which follow. Upon review of the ERIS reports, Draper Aden Associates identified and summarized the following information pertaining to the subject property, adjacent and off-site properties, and unmappable orphan properties. Note the distances and directions are estimated from the subject property boundary as provided in the ERIS report, Appendix C.

#### ***Subject Property***

The ERIS report used the ASTM-defined minimum search distances in the regulatory database review for this project. The subject property was identified within the standard environmental record sources under the SPILLS database as having had a release at the site on May 5, 2006. 1 Magnox Drive is identified as the origination of the reporting telephone call, which was the former office of Magnox Specialty Pigments. However, the location of the spill occurred off-site at the Magnox Specialty Pigments industrial plant to the southwest beyond Tract Fork. The incident received closure on June 2, 2006.

*Cross-reference:* VDEQ Pollution Incident Summary Report # 253754 was reviewed regarding the above referenced SPILLS incident. No further information was provided.

#### ***Adjacent Properties***

The ERIS report used the ASTM-defined minimum search distances in the regulatory database review for this project. No adjacent properties were identified.

*Cross-reference:* During the site visit on February 23, 2021, the property identified as Kirby's Service Center adjacent to the southeast was observed to have a partially buried aboveground storage tank (AST) on the western side of the property. Due to position of the tank and slope of the Kirby property, surface spills would likely drain to the south towards Peak Creek, away from the subject property. Historical telephone directories list the following names for the service center; 1961 – Johnston Motor Co., 1970 – West End Garage, and 2005 – Kirby Service Center. The site dates to 1948 according to the fire insurance map of the same date which shows a gas underground storage tank (UST) on the east side of the property. Although no database records were identified for this site, it should be noted that facility operations occurred prior to regulatory recordkeeping.

Note: Based on current GIS identified property lines, the Kirby Service Center is adjacent to the subject property. According to the Key Site Manager, the City recently took ownership of the small piece of property on which the existing water pump station is located. While DAA was unable to locate property records to this effect, the property lies between the subject property and the Kirby Service Station in which case the Kirby Service Station property is not adjacent.

### ***Vicinity Properties***

The ERIS report used the ASTM-defined minimum search distances in the regulatory database review for this project (see Appendix C for ASTM minimum search distances).

Groundwater beneath the subject property is presumed to flow west-southwest (see Section 4.3.2 for details). This general characterization of groundwater flow is based on an assumption of relatively simple subsurface aquifer conditions and that Tract Fork is the local groundwater discharge zone (groundwater sink). The combined effects of subsurface bedrock type and utility corridors in typical urban development are specifically identified in this Phase I ESA as having the potential for enhanced and non-systematic migration pathways in the subsurface.

Sites identified in the ERIS report and located within the standard environmental record search radii are likely hydrologically and topographically down-gradient from the subject property or

considered unlikely to impact the subject property due to inferred groundwater flow conditions and hydrological divides created by Tract Fork, the topographic high east of the property, and Peak Creek. Based upon the presence of a local topographical high oriented north-south along Henry Avenue, the distance to the subject property, properties east of Henry Avenue are unlikely to impact the subject property.

The ERIS report identified listed multiple sites within the standard search radii. Although regulatory closure was received, should information become available, regulatory agencies may reopen the case and additional investigation and corrective action may be required, if warranted. There is potential for complicating factors associated with subsurface bedrock that may lead to enhanced subsurface migration pathways, or non-systematic groundwater flow rates and direction due to construction, excavation and filling activities and the potential for impact to the subject property. Of note are the following sites located in close proximity to the subject property.

- ◆ Hercules Plant – 720 Commerce Street

The ERIS Report lists the site in the SEMS-Archive under EPA ID VAD980705636. The site was discovered in 1986 and a preliminary assessment listed the site as NFRAP (no further remedial action planned), the site is not listed on the NPL. The site is listed as having a 1,000-gallon gasoline UST tank removed from the ground and closure achieved.

- ◆ NanoChemonics – 4 Magnox Drive

NanoChemonics, is listed in the Superfund Enterprise Management System (SEMS; formerly Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database under EPA ID VAN000306716. Pollution complaint 2010-W-1068 was received on October 16, 2009 indicating that unknown chemicals had been buried on the site in steel drums. PC 2010-W-1068 is listed as closed on November 18, 2011 in the ERIS report. The NanoChemonics site is located approximately 15 feet higher in elevation than the subject property but is located

approximately 0.11 miles southwest of the subject property to the north of Peak Creek and to the west of Tract Fork, a south-flowing perennial tributary to Peak Creek which is located (upstream) of NanoChemonics and adjacent west of the subject property. NanoChemonics formerly manufactured nanoparticle iron oxides for various industries; the company ceased operations in July 2010 and an EPA-approved Response Action Plan was implemented from April 2011 through August 2016 to remove hazardous substances and polychlorinated biphenyls (PCBs) remaining at the site following demolition of the on-site structures and buildings. Groundwater flow from the NanoChemonics site is likely in a southeasterly direction toward Tract Fork and Peak Creek. Similar to Peak Creek, Tract Fork likely acts as a groundwater divide between NanoChemonics to the west and the subject property to the east. Therefore, the potential for subsurface environmental impact to the subject property from NanoChemonics is considered unlikely due to inferred groundwater flow conditions. However, due to the known flooding of Peak Creek, historical use and constituents of concern and close proximity to the subject property, there is a potential for impact to the subject property, however, no documented releases to the subject property are known.

### **Orphan Sites**

Unmappable orphan properties, those that have poor or inadequate address information, were also reviewed. Due to the limited information available for review, the minimum search distance for these orphan sites was limited to the subject property and adjoining properties. No orphan sites matching the subject property or adjoining properties were documented in the ERIS regulatory search.

#### **4.1.1 Activity and Use Limitations (AULs)**

The current property owner did not indicate knowledge of any AULs for the property since purchase.

#### **4.2 Other Records Review**

DAA reviewed VDEQ Pollution Incident Summary Report # 253754 regarding the SPILLS entry documented in the ERIS report (Appendix C). No other additional file review beyond above noted request was performed as part of this Phase I ESA.

#### **4.3 Physical Setting Sources**

In accordance with ASTM E1527-13, the U.S. Geological Survey (USGS) Pulaski, Virginia 7.5-minute topographic quadrangle map (USGS, 2019), floodplain maps, wetland maps, and soil and geologic mapping of the area were reviewed to evaluate the physical setting of the subject site and vicinity as described below. The ERIS Physical Setting Report (PSR), presented in Appendix C, provides information about the physical setting beneath and around the subject property and includes topography, in addition to hydrologic, geologic and soil characteristics.

##### **4.3.1 Topographic Conditions**

A site location map derived from the 7.5-minute Pulaski, Virginia topographic quadrangle map is provided as Figure 1. Elevation of the subject property is approximately 1,920 feet above mean sea level. The subject property is relatively flat, with a slight downward slope towards Tract Fork along the western property border (Figure 2).

Storm water likely flows along the topographic gradient across the subject property and discharges into Tract Fork, which flows south and drains into Peak Creek. Peak Creek is located approximately 400 feet south of the subject property. According to U.S. Federal Emergency Management Agency (FEMA) mapping, the entire subject property is located within the 100-year floodplain, although the base flood elevation has not been determined (FEMA, 2008).

In addition to the 2019 USGS topographic map, Draper Aden Associates reviewed historical topographic quadrangle maps from 1934 to 2016 (Appendix B). Review of the current and historical topographic maps does not provide evidence that the elevation has changed on the subject property; however, due to the resolution of the maps and due to site development, the potential of slight elevation changes and the introduction of potential fill material on the subject site cannot be completely eliminated.

#### **4.3.2 Regional and Local Geology (USGS)**

The subject property is located within the highly folded and faulted Valley and Ridge Physiographic province of Virginia. According to the *Geologic Map of the Pulaski Quadrangle*, the subject property is underlain by the Cambrian-aged Elbrook Formation. The Elbrook Formation consists of dolomite and limestone with thin lenses of shale and sandstone (Schultz *et al.*, 2015). Dolomite and limestone are carbonate rock types conducive to karst terrane.

Karst topography is common in areas underlain by the Elbrook Formation. The term karst describes a distinctive topography that indicates solution of underlying soluble rocks (such as limestone and dolomite) by surface water or groundwater. This solution can create voids in the underlying bedrock. These voids may ultimately collapse, and a sinkhole is formed. In addition, karst topography is vulnerable to groundwater pollution due to the ease of water flow throughout the system and the lack of natural filtration systems. No karst features are documented on the subject property based on the information reviewed.

Assumed groundwater flow beneath the subject property is likely west-southwest towards Tract Fork; however, actual groundwater flow directions cannot be determined without site-specific groundwater testing. This general characterization of groundwater flow is based on an assumption of relatively simple subsurface aquifer conditions and that Tract Fork is the local groundwater discharge points (groundwater sink) for the area.

Based upon inferred directions of groundwater flow, the facilities that might adversely affect the quality of groundwater underlying the subject property are those located to the north and east

of Tract Fork. While properties north and east of the subject property are considered upgradient, a topographic high east of the subject property along which Henry Avenue runs north and south, forms a hydrogeologic divide. East of Henry Avenue, the topography slopes to the east, and groundwater likely flows south toward Peak Creek; therefore, properties east of Henry Avenue are not considered upgradient of the subject property

#### **4.3.3 Agronomic Soil Conditions (USDA)**

According to the United States Department of Agriculture (USDA) National Resources Conservation Service (NRCS) mapping, the soil underlying the subject property is identified as Urban. Urban soils are generally described as soil that has been so altered or obscured by development that classification is not practical. The northern reaches of the property are identified as Lindsides-Nolin silt loams. A copy of the soil survey map is included in the ERIS PSR report (Appendix C).

#### **4.3.4 Wetlands (USF&W)**

A wetlands assessment/survey is beyond the scope of services, however, the National Wetlands inventory map (Appendix C) does not indicate wetlands located on site.

### **4.4 Historical Use Information – Subject Property and Adjacent Properties**

The historical site use as described below was based on review of information presented in the various practicably reviewable and reasonably ascertainable historical resources evaluated and referenced in Section 9.0 and located in Appendix B. Historical fire insurance maps were available for the years 1894 to 1959. Historical topographic maps were available for years 1934 to 2019. Town directories were available between the years 1961 and 2020. Aerial photographs were available for years 1949 to 2018. Recorded land title records and interviews were used to assist in the understanding of previous uses of the subject property and surrounding area.

#### **4.5 Historical Use - Subject Property:**

Sanborn Fire Insurance (Sanborn) maps dated 1898 to 1927 depict the subject property as vacant/undeveloped and a 1948 Sanborn map is the first to show the former school building present. Reportedly, the site was used as a school from 1939 to 1966. After the school closed in the late 1960s the building remained vacant as documented in the 1975 telephone directory. In 1980 the address is listed as utilized by the Head Start program. In 1985 the directory listing includes a New River community social services group as well as the Head Start program. The 1990 directory lists the property as home to Magnavox storage and warehouse. 1990 and 1995 directory entries list the occupant as Magnox Iron Oxide.

According to Pulaski County GIS documentation, former site owners include:

- ◆ STNP, LLC (2011-2019)
- ◆ NanoChemonics Holdings LLC (2006-2011)
- ◆ Magnox Acquisition Inc. (2005-2006)
- ◆ West Main Manufacturing Inc. (1990-2005)
- ◆ Pulaski County (Unknown-1990)

Reportedly, the site was utilized as storage and office space by the former NanoChemonics/Magnox industry. Site use by West Main Manufacturing during 1990-2005 is unknown. The 2021 site reconnaissance confirmed that the former Calfee School property is currently vacant.

#### **4.6 Historical Use - Adjacent Properties and Vicinity:**

##### ***Summary***

Based on information noted above, adjoining and surrounding properties in the general vicinity of the subject property were primarily residential tracts dating to the late 1800s and possibly earlier. The following information summarizes historical adjacent property use. RECs, if identified, are discussed below. Select noted properties are identified on Figures 2.

## ***Adjacent and Vicinity Properties***

**North:** Historical property use adjacent to and in the vicinity of the subject property to the north has been undeveloped or residential since the late 1890s based on review of Sanborn maps and aerial images. Tract Fork separates the subject property from properties to the northwest. Adjacent properties to the north-northeast may have localized groundwater flow towards the subject property and Tract Fork; however, groundwater for vicinity properties to the east of Henry Avenue is expected to be to the southeast.

**South:** Historical property use adjacent to the south of the subject property has been primarily residential. The 1898 Sanborn map shows the original Calfee School south of Magnox Drive. Reportedly the school burned down approximately 1938 and was the catalyst for building the new school across the street on the subject property. A flour and corn grist mill is present to the southeast which operated by utilizing the former mill race that serves as the eastern property line of the subject property. Remaining adjacent areas to the south are residential.

Vicinity property use to the south and southeast has historically been residential with a few stores and churches. Sanborn maps indicate that beyond Tract Fork to the southwest, historical use included a foundry, coal yard, mineral refining plant, and saw-mill. This area was later occupied by NanoChemonics/Magnox to produce iron oxide materials used in the production of video and audio recording tapes and laser printing. Production at the facility ceased in July 2010, and most of the buildings have since been demolished. See Section 4 for additional discussion on NanoChemonics/Magnox.

In 1948, the Sanborn map depicts an auto service center with a UST to the southeast beyond the water pump station parcel and across Magnox Drive. On the 1959 Sanborn map, the service center was expanded to cover the area of the UST depicted on the 1948 map. The business still exists operating as Kirby's Service Center. No documented releases at this site were identified.

Properties to the south, southwest, and southeast are considered down-gradient of the subject property.

**East:** Adjacent property use to the east of the subject property has been residential since the late 1890s as depicted on the historical Sanborn maps and aerial images. Adjacent properties to the east may have localized groundwater flow towards the subject property and Tract Fork; however, groundwater flow for properties beyond Henry Avenue to the east is expected to be to the south-southeast.

**West:** Tract Fork forms the western border of the subject property. On the western bank of Tract Fork, Sanborn maps and historical aerials indicate that property use has been residential or undeveloped since at least 1898. Properties west of the subject property are separated by the hydrogeological divide formed by Tract Fork.

## **5.0 SITE RECONNAISSANCE**

Draper Aden Associates performed the Phase I ESA site reconnaissance on February 23, 2021.

The subject property and surrounding areas are depicted in Figure 2. Representative site photographs are presented in Appendix A.

### **5.1 Methodology and Limiting Conditions**

Field observations were documented systematically. Field personnel observed exterior conditions and interior rooms using a clockwise pattern. After completing observations on the subject property, field personnel observed conditions at adjacent properties from the property boundary. Limiting conditions encountered were as follows:

- ◆ Heavy vegetation along the exterior boundary lines of the property (north, east, and west) limited viewing of the ground surface in those areas.
- ◆ The buildings have various furniture items (desks, bookcases, file cabinets) and former equipment stored inside blocking view of the underlying surfaces.

### **5.2 General Site Setting (Beyond Information Provided in Section 2.0)**

Access to the site is via Magnox Drive which forms the southern site boundary. Access into the buildings are through locked doors and access to the property by vehicle is through a locked gate. The northern portion of the subject property behind the building is undeveloped. Mature trees line Tract Fork to the west and the former mill race to the east.

### **5.3 Exterior Observations**

#### **5.3.1 Chemical Storage Areas (excluding storage tanks and drums discussed below)**

No exterior chemical storage areas were observed.

#### **5.3.2 Underground or Aboveground Storage Tanks**

No aboveground storage tanks or evidence of underground storage tanks were observed.

### **5.3.3 Odors**

No strong, pungent or noxious odors were noted.

### **5.3.4 Pools of Liquid**

No pools of liquid were observed on the property.

### **5.3.5 Drums**

No drum were observed on the exterior grounds of the property.

### **5.3.6 Polychlorinated Biphenyls (PCBs)**

A total of five pole mounted transformers are present near the southeast corner of the site along Magnox Street. PCB presence, or absence was not discernable for these transformers; however, they were in good condition and no leakage was observed.

### **5.3.7 Subsurface Structures (Excluding storage tanks, wells and septic systems)**

No subsurface structures were observed.

### **5.3.8 Waste Disposal Areas (Including Solid Waste)**

No areas of waste disposal were observed.

### **5.3.9 Pits, Ponds, or Lagoons**

No pits, ponds or lagoons were observed.

### **5.3.10 Stained Soil or Pavement**

No areas of stained soil or pavement were observed.

### **5.3.11 Staining or Corrosion**

No staining or corrosion was observed.

### **5.3.12 Stressed Vegetation**

No stressed vegetation was observed.

### **5.3.13 Wells and Septic Tanks**

No wells or septic tanks were observed.

## **5.4 Interior Observations (Beyond Information Provided in Section 2.0)**

The following observations reflect the interior spaces of the buildings. The steel storage shed positioned east of the Calfee School is built on a concrete slab. The shed currently houses many steel file cabinets and bookshelves left by the former industry. The school building also houses many file cabinets, bookshelves, and desks. Floor coverings are a mixture of carpet, bare concrete, tile, and parquet wood flooring. The northern area of the building has been made into two-stories with the addition of a loft area. The second-floor loft area has a bare wood floor and currently stores leftover supplies from the Magnox industry. Water intrusion has severely damaged the 1950's addition on the west side of Calfee School.

### **5.4.1 Chemical Storage Areas (excluding storage tanks and drums discussed below)**

A small amount of household cleaners are present on the first floor of the school building. A cabinet labeled for flammables is present in the 1950's addition. The cabinet was empty. On the second-floor loft, several boxes of powdered alumina were observed. Spillage of the fine powdered alumina has occurred on the second floor. The powder is considered a nuisance particle. No other areas of stored chemical were observed.

### **5.4.2 Underground or Aboveground Storage Tanks**

No above or below ground storage tanks were observed.

### **5.4.3 Odors**

No strong, pungent or noxious odors were noted.

#### **5.4.4 Pools of Liquid**

No pools of liquid were observed.

#### **5.4.5 Drums**

A single, steel, 55-gallon drum is present on the second-floor loft. The drum has a secured lid, appears in good condition, and no leakage or staining was observed in the area. No identifiable markings are present on the drum. The contents of the drum, or lack-there-of, is unknown.

#### **5.4.6 Polychlorinated Biphenyls (PCBs)**

Potential PCB containing electrical equipment is present within the former boiler room; however, the equipment appears to be newer associated with AC/Heat pumps installed in the 1990s. Fluorescent lighting was noted within the buildings. The quantity, presence or absence of PCBs in these items could not be determined. These should be handled and disposed of properly.

#### **5.4.7 Subsurface Structures including Drains and Sumps**

Multiple floor drains are present within the building located in bathrooms. A floor grate drain is also present in the former boiler room.

#### **5.4.8 Waste Disposal Areas**

No waste disposal areas were observed.

#### **5.4.9 Pits, Ponds, or Lagoons**

No pits, ponds or lagoons were observed.

#### **5.4.10 Staining or Corrosion**

No staining or corrosion were observed.

### **5.5 Asbestos Containing Materials (ACM)/Lead-Based Paint (LBP)**

ACM and LBP survey reports were provided to DAA by PRHA and are presented in Appendix D. HDHT, Inc. prepared a partial asbestos inspection report dated September 20, 2019 which noted the presence of ACM within building materials. HDHT, Inc. returned to the site soon after to perform additional ACM inspection and a LBP survey. The second report, dated March 5, 2020, identified LBP present within the building.

### **5.6 Adjacent Properties**

The conditions of adjacent properties were observed from the subject property boundary and public right-of-way. The properties surrounding the subject property are as noted in Section 2.5.

A home heating oil AST is present on an adjacent residential property at the southeast corner of the subject property. No spills have been documented at the address. A partially buried, approximate 500-gallon AST was observed at Kirby's Service Center. As noted in Section 4.1, Kirby's Service Center may not be adjacent pending confirmation of new lot lines. Should a release from the AST occur, existing topography dictates that surface runoff would be to the south towards Peak Creek, away from the subject property.

Draper Aden Associates personnel did not observe any pits, ponds, lagoons, or pools of liquid, nor any visual or olfactory evidence of environmental issues from the subject property boundaries or from the public right-of-way to indicate impact from the remaining adjacent properties to the subject property.

Draper Aden Associates personnel did not observe any other evidence of environmental issues with the adjoining properties from the subject property boundary or from the public right-of-way.

## **6.0 INTERVIEWS**

Draper Aden Associates conducted interviews, provided questionnaires, and/or requested information from the property owner/key site manager, past property owner, local fire department, and a local government official, unless noted below. Interview, questionnaire, and/or information request documentation is included in Appendix B.

### **6.1 Current Property Owner/Key Site Manager and User**

Ms. Darlene Burcham, Town Manager for the Town of Pulaski and USEPA Brownfields Grantee Representative, represents a User. Ms. Burcham has been with the Town of Pulaski, Virginia for approximately a year and had little knowledge of the subject property beyond its former use as a School Building and offices for Magnox. Ms. Burcham had no knowledge of present or former underground or above ground storage tanks, chemical use, storage, or disposal practices. Ms. Burcham provided documentation of former asbestos and lead based paint investigations at the former school building.

The interview with Ms. Burcham and a completed User Questionnaire is documented in Appendix B.

### **6.2 Local Government Official**

Mr. Robbie Kiser, Town of Pulaski Fire Chief (18+years), was interviewed via telephone on February 25, 2021 to obtain information indicating potential RECs in connection with the property (e.g., emergency response and petroleum or hazardous waste releases at the site or on adjacent parcels). Mr. Kiser could not recall any knowledge regarding past or present underground/ above ground storage tanks or chemical use, storage, or disposal practices. Mr. Kiser's interview is documented in Appendix B.

### **6.3 Additional USER/Key Site Manager**

Mrs. Jill Williams, Executive Director of the Calfee Community & Cultural Center, represents a User and is a Key Site Manager at the site. CCCC is interested in receiving the subject site as a donation. Mrs. Williams was present during the site reconnaissance on February 23, 2021. Mrs. Williams had little knowledge of the subject property beyond its former use as a School Building. Mrs. Williams had no knowledge of present or former underground or above ground storage tanks, chemical use, storage, or disposal practices. Mrs. Williams interview is documented in Appendix B.

Mrs. Williams completed a Transaction Screen Questionnaire and User Questionnaire presented in Appendix B.

### **6.4 Past Property Owner**

STNP, LLC is the previous owner of the subject site. Jonathan Frank is listed as the Principal/Registered Agent for the LLC. No contact information was readily available for Mr. Frank and STNP, LLC has been unresponsive to recent Town of Pulaski correspondence. Sufficient historical resources were available for review so this data gap is not considered significant at this time.

## **7.0 FINDINGS, OPINIONS, AND CONCLUSIONS**

### **7.1 Findings, Opinions and Conclusions**

The results of this assessment represent a review of current conditions based on reasonably ascertainable information and limited observations. A finding of a recognized environmental condition (as defined by the ASTM standard and detailed in the limitations section of this report) does not imply that impact actually exists, but that more information may be warranted.

Draper Aden Associates performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 for the property located at 1 Magnox Drive in Pulaski, Virginia (GIS Address). Any exceptions to, or deviations from, this practice are described in Section 8.0 of this report. This assessment revealed no evidence of RECs in connection with the subject property except for the following:

#### **7.1.1 Recognized Environmental Conditions**

Note, a finding of RECs does not imply that impact actually exists, but that more information may be warranted.

##### **Subject Property**

HDHT, Inc. mobilized to the subject property and completed ACM and LBP inspections at the request of the PRHA. The reports dated September 20, 2019 and March 5, 2020 noted the presence of ACM and LBP within the former Calfee School building (See Appendix D).

##### **Adjacent and Vicinity Properties**

None.

### 7.1.2 Findings (Not RECs)

- ◆ The site was used as a school from reportedly 1939 to 1966. Reportedly, the site was later utilized as storage and office space by the former NanoChemonics/Magnox industry located to the southwest. Site use by West Main Manufacturing during 1990-2005 is unknown.
- ◆ A vapor intrusion survey was outside the scope of services; however, the potential for vapor impact to the subject property was assessed. Based on the database review, no environmental conditions are likely to cause a vapor encroachment condition at the subject property.
- ◆ A partially buried AST is present on property in close proximity to the southeast (See Sections 4.1 and 5.6). The site, Kirby's Service Center, dates back to 1948 and is known to have stored and dispensed fuel. Although no recorded releases have occurred at the address, the site operated prior to record keeping requirements. The site is positioned down-gradient of the subject property. However, given the proximity of the site to the subject property and the potential for non-systematic migration pathways, should additional information become available, this site should be reevaluated as a REC.
- ◆ Potential PCB containing electrical equipment is present within the former boiler room; however, the equipment appears to be newer associated with AC/Heat pumps installed in the 1990s. Fluorescent lighting was noted within the buildings. The quantity, presence, or absence of PCBs in these items could not be determined. These should be handled and disposed of properly. Five, pole mounted transformers are present along Magnox Street near the southeast corner of the property. PCB presence, or absence was not discernable for these transformers; however, they were in good condition and no leakage was observed.
- ◆ Observations made during the February 23, 2021 reconnaissance suggests the small addition to the western side of the Calfee School may have been used as a laboratory space. A steel, flammables cabinet and an eye-wash station are present in the room. If further information should become available, this should be reevaluated as a REC.

- ◆ The subject property was identified within the standard environmental record sources under the SPILLS database as having had a release at the site on May 5, 2006. 1 Magnox Drive is identified as the origination of the reporting telephone call, which was the former office of Magnox Specialty Pigments. However, the location of the spill occurred off-site at the Magnox Specialty Pigments industrial plant to the southwest beyond Tract Fork. The incident received regulatory closure on June 2, 2006.
- ◆ The environmental regulatory database report listed multiple sites within the standard search radii. Three nearby off-site properties, (*ERIS 6, 12, and 28*) are positioned up-gradient to the subject property to the northwest. These three sites are separated from the subject site by Tract Fork and were associated with heating oil releases. The three incidents have also received regulatory closure by the VDEQ. Regulatory closure does not preclude that a site may be reopened in the future should new data become available. However, based on available information at this this time, the sites are not anticipated to pose an environmental risk to the subject property.
- ◆ Within the second-floor loft area at the northern end of the Calfee School Building lies a single 55-gallon, steel drum and approximately 4 boxes of fine powdered alumina. These items should be handled and disposed of properly. The drum has a secured lid, appears in good condition, and no leakage or staining was observed in the area. No identifiable markings are present on the drum. The contents of the drum, or lack-there-of, is unknown.
- ◆ A small above ground hydraulic lift is present at the northern end of the Calfee School Building identified as an ECOA EZ Stacker. No leakage or staining was observed in the area of this piece of equipment.
- ◆ According to U.S. Federal Emergency Management Agency (FEMA) mapping, the subject property is located within the 100-year floodplain, although the base flood elevation has not been determined (FEMA, 2008).
- ◆ Discharges into Peak Creek from nearby industrial activities on both sides of Peak Creek and its nearby tributaries have the potential to mobilize contaminants and impact the subject property, during flooding.

### **7.1.3 Historical Recognized Environmental Condition (HREC)**

No HRECs, as defined by the ASTM Standard (see Section 8.0), were observed.

### **7.1.4 Controlled Recognized Environmental Condition (CREC)**

No CRECs, as defined by the ASTM Standard (see Section 8.0), were observed.

### **7.1.5 De Minimis Conditions**

No De Minimis Conditions, as defined by the ASTM Standard (see Section 8.0), were observed.

## **7.2 Data Gaps**

- ◆ The previous property owner, STNP, LLC, was not contacted as part of this Phase I ESA. The former property owner has been unresponsive to Town of Pulaski correspondence. Sufficient historical resources were available for review so this data gap is not considered significant at this time.
- ◆ Heavy vegetation along the exterior grounds of the property limited viewing of the ground surface along the banks of the former Mill Race and Tract Fork. The northern most area of the property is also covered in dense vegetation. This is not a significant data gap based on available information at this time.
- ◆ The storage shed and Calfee School contains many bookcases, file cabinets, and desks limiting viewing of all flooring areas. This is not a significant data gap based on available information at this time.

## 8.0 LIMITATIONS AND EXCEPTIONS

Draper Aden Associates prepared this document in accordance with generally accepted standards of environmental practice, and in general accordance with the scope and limitations of the ASTM E1527-13: *Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process*. The conclusions presented in this report are professional opinions based on data described in this report, and are intended only for the purpose, site location, and project indicated. The conclusions presented in this report are based on the assumption that site conditions do not deviate from those observed during the study and described in this report. This report is not an exhaustive study of potential environmental impact at the site and should not be interpreted as such. An evaluation of subsurface soil and groundwater conditions, radon, wetlands assessment, or historical building evaluation was not performed as part of this assessment. Select ASTM definitions are provided below:

- ◆ *controlled recognized environmental condition (CREC)*—a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).
- ◆ *historical recognized environmental condition (HREC)*—a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted.

- ◆ *de minimis condition*—a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.
- ◆ *business environmental risk*—a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in a standard ASTM Phase I Environmental Site Assessment.

This report has been prepared for the subject property pursuant to an agreement with the Town of Pulaski and is accurate to the best of Draper Aden Associates' knowledge and belief. This report is based, in part, on unverified information supplied to Draper Aden Associates by third-party sources. While efforts have been made to substantiate this third-party information, Draper Aden Associates cannot guarantee its completeness or accuracy.

It is the responsibility of the client to notify the appropriate federal, state and/or local government agencies of our findings, as may be required by law.

## **8.1 Scope of Services**

Draper Aden Associates provides this ESA in accordance with our general Scope of Services for Environmental Site Assessments. This includes the Phase I ESA, which generally consists of historical data and regulatory agency file records. Interviews with the site owner/operator and state and/or local officials were conducted. A reconnaissance of the subject property also was conducted. Data were evaluated and a written report prepared documenting the investigative activities. Findings and conclusions are included. An environmental lien search was not conducted by Draper Aden Associates. Subsurface or surface sampling, as well as wetland, asbestos, radon gas, lead-based paint, historical building, and vapor intrusion evaluations are not conducted during the Phase I effort, unless specifically requested by the client.

## **8.2 Terms and Conditions**

Draper Aden Associates completed this Phase I ESA in accordance with the terms and conditions noted above.

## **8.3 User Reliance**

The Phase I ESA is designed to assist the User, as defined by ASTM E1527-13, in developing information about the environmental conditions of a property. This Phase I ESA is site-specific and relates to the assessment of environmental conditions at the subject property only. No Phase I ESA can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for environmental conditions.

## **8.4 Deviations**

Draper Aden Associates conducted this Phase I ESA in general accordance with ASTM Practice E1527-13. The report describes deviations from the standard practice, where necessary. Section 7.0 lists Data Gaps based on limiting conditions. Other identified limiting conditions are detailed in Section 5.0.

## **8.5 Additional Services**

Draper Aden Associates is not conducting any additional environmental services for the subject property at this time.

## Signature of Environmental Professionals

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §311.00(b) of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries, or have directly supervised the activities of the all appropriate inquiries, by Draper Aden Associates staff in conformance with the standards and practices set forth in 40 CFR Part 312.

W. B. 878  
Pulaski, Va  
24301

THIS QUITCLAIM DEED made and entered into this 30th day of June, 1989, by and between the BOARD OF SUPERVISORS OF PULASKI COUNTY, VIRGINIA, a political subdivision of the Commonwealth of Virginia, hereinafter referred to as "GRANTOR", and WEST MAIN MANUFACTURING INCORPORATED, a Virginia Corporation, hereinafter referred to as "GRANTEE".

W I T N E S S E T H:

THAT FOR and in consideration of the sum of NINETY THOUSAND DOLLARS (\$90,000.00), cash in hand paid by the Grantee unto the Grantor and other good and valuable consideration, the receipt of all of which is hereby acknowledged, the Grantor does hereby bargain, sell, grant, convey and quitclaim unto the Grantee, all of its right, title, estate and interest in and to all that certain tract or parcel of land lying in the Town and County of Pulaski, Virginia, and being more particularly described as follows; all of that portion of the Calfee School property East of the Tract Fork (North Fork) of Peak Creek.

And being a portion of the same tract or parcel of land declared surplus property by the Pulaski County School Board on November 3, 1988, and conveyed unto the County of Pulaski by Deed dated the 10th day of April, 1989.

Nelther the County of Pulaski nor its Board of Supervisors makes any warranty or representations of any type as to any improvements which may now exist on the property herein conveyed. The Grantee by their duly authorized signatories accept the property herein conveyed without warranties and representations.

All of the duties, obligations, acknowledgements and waivers agreed to by the Grantee in an agreement between the Grantor and Grantee dated March 21, 1989, are incorporated herein and by this reference made a part of this Deed as if fully set out herein, and Grantee executes this Deed to acknowledge being bound thereby.

Examined and Delivered  
To Thomas J. McCarthy Jr  
April 5 1990  
R. Glenwood Lichfield Clerk  
P.O. Box 878  
Pulaski, Va 24301

PURCHASE MONEY  
DEED OF TRUST

THIS DEED OF TRUST ("Security Instrument"), is made on this 30<sup>th</sup> day of June, 1989. The grantor is WEST MAIN MANUFACTURING INCORPORATED ("Grantor"). The trustee is ROBERT J. INGRAM, of Pulaski, Virginia, and THOMAS J. MCCARTHY, JR., of Pulaski, Virginia, trustees (any one of whom may act and who are referred to as "Trustee"). The beneficiary is the BOARD OF SUPERVISORS OF PULASKI COUNTY, VIRGINIA, which is organized and existing under the laws of the Commonwealth of Virginia, and whose address is 143 Third Street, N.W., Pulaski, Virginia, 24301 ("Beneficiary"). Grantor owes Beneficiary the principal sum of NINETY THOUSAND DOLLARS (\$90,000.00). This debt is evidenced by Grantor's note dated the same date as this Security Instrument ("Note"), which provides for yearly payments, with the full debt, if not paid earlier, due and payable on March 21, 2001. This Security Instrument secures to Beneficiary: (a) the repayment of the debt evidenced by the Note, and all renewals, extensions and modifications; (b) the payment of all other sums, advanced under paragraph 6 to protect the security of this Security Instrument; and (c) the performance of Grantor's covenants and agreements under this Security Instrument and the Note. For this purpose, Grantor irrevocably grants and conveys to Trustee, in trust, with power of sale, the following described property located in the Town and County of Pulaski, Virginia:

All of that portion of the Calfee School property East of the Tract Fork (North Fork) of Peak Creek,

And being the same property conveyed unto the Grantor by Deed recorded contemporaneously herewith,

which has the address of 300 West Main Street, Pulaski, Virginia, 24301. ("Property Address");

Together with all the improvements now or hereafter erected on the property, and all easements, rights, appurtenances, rents, royalties, mineral, oil and gas rights and profits, water rights and stock and all fixtures now or hereafter a part of the property, All replacements and additions shall also be covered by this Security Instrument. All of the foregoing is referred to in this Security Instrument as the "Property."

Grantor covenants that Grantor is lawfully seised of the estate hereby conveyed and has the right to grant and convey the Property and that the Property is unencumbered, except for encumbrances of record. Grantor warrants and will defend generally the title to the Property against all claims and demands, subject to any encumbrances of record.

This Security Instrument combines uniform covenants for national use and non-uniform covenants with limited variations by jurisdiction to constitute a uniform security instrument covering real property.

UNIFORM COVENANTS. Grantor and Beneficiary covenant and agree as follows:

1. Payment of Principal; Prepayment and Late Charges. Grantor shall promptly pay when due the principal of the debt evidenced by the Note and any prepayment and late charges due under the Note.

**PRELIMINARY INFORMATION FORM (PIF) for INDIVIDUAL PROPERTIES**

**DHR No. (to be completed by DHR staff)** 125-0034

**Purpose of Evaluation**

Please use the following space to explain briefly why you are seeking an evaluation of this property.

Community members in Pulaski have come together to renovate the historic Calfee Training School into a community and cultural center that will house a childcare program, a museum commemorating local African American history, a community kitchen, multiple event and office spaces, a computer lab, two natural outdoor playspaces and a half basketball court. A Community Development Block Grant planning grant has funded the preliminary designs for the preservation/adaptive reuse projects and has estimated that the costs of renovation/rehabilitation will be approximately \$2.5M. Approximately an additional \$600,000 will be needed for the equipment and start-up costs. The community hopes to raise the majority of these funds through state and federal sources, including but not limited to the National Parks Service, the National Trust for Historic Preservation and historic tax credits. All of these sources require that the building be listed on the Virginia Landmarks Register and the National Register of Historic Places. Additionally, Calfee Training School alumni are very interested in erecting an official historic marker that educates the public about the school's nationally significant history.

Are you interested in applying for State and/or Federal Rehabilitation Tax Credits? Yes ☒ No ☐

Are you interested in receiving more information about DHR's easement program? Yes ☒ No ☐

**1. General Property Information**

Property name: Calfee Training School

Property address: 1 Corbin-Harmon Drive (Formerly 1 Magnox Drive)

City or Town: Pulaski, VA

Zip code: 24301

Name of the Independent City or County where the property is located: Pulaski

Category of Property (choose only one of the following):

Building ☒ Site ☐ Structure ☐ Object ☐

**2. Physical Aspects**

Acreage: 2.66

Setting (choose only one of the following):

Urban ☐ Suburban ☐ Town ☒ Village ☐ Hamlet ☐ Rural ☐

Briefly describe the property's overall setting, including any notable landscape features:

The property is geographically bounded by Corbin-Harmon Drive (formerly Magnox Drive, also W. Main Street) on the South, Tract Fork Creek on the West, and the property line on the East. (A recent property survey is available.)

### Architectural Description

Architectural Style(s): Colonial Revival

If the property was designed by an architect, landscape architect, engineer, or other professional, please list here: \_\_\_\_\_

If the builder is known, please list here: Public Works Administration

Date of construction (can be approximate): 1939

### Narrative Description:

In the space below, briefly describe the general characteristics of the entire property, such as its current use (and historic use if different), as well as the primary building or structure on the property (such as a house, store, mill, factory, depot, bridge, etc.). Include the architectural style, materials and method(s) of construction, physical appearance and condition (exterior and interior), and any additions, remodelings, or other alterations.

The historic Calfee Training School has been sitting empty for nearly 10 years. Originally built as a Jim Crow-era school for African American children, it became a desegregated kindergarten after 1966 and was then utilized as a Head Start preschool program. The school building is a classical T-shape with the front of the structure (formerly including classrooms and administrative areas) facing Corbin-Harmon Drive (formerly Magnox Dr.). The gross square footage of this area is approximately 15,670 gross square feet (outside face of wall to outside face of wall).

In 1990, Magnox Corporation renovated the Calfee Training School for use as an office space. At that time, the gym/cafeteria/multipurpose area was divided into two floors and used as a storage and warehouse facility for Magnox. The entrance area to the building from the front door was enlarged, taking space from four classrooms and adding a built-in reception desk. No renovations have occurred since that time.

A 1990 resource report prepared by Gibson Worsham, Holley Olden and Mark Bittle describes the building as a:

“One story school with integral hipped wings and cafeteria/gym wing to rear. 4-course American bond brick construction; metal standing-seam gable roof with parapet; nine bays.

Common bond pressed brick with Flemish bond course every fourth course; 12 over 12 paired window sash; concrete foundation, classical door surrounded with pilasters, pediment, and paneled reveals, parapet walls with chimney at each end of main block. Basement iron vent grills contain letters VSBE.”

They list the exterior components at the time as follows:

Component	Component Type	Material	Material Treatment
Structural System and Exterior Treatment	Masonry	Brick	American/Common Bond
Windows	Sash, Double Hung	Wood	Other

Roof	Gable	Metal	Standing Seam
Chimneys	Exterior End	Brick	Cap. Corbeled
Foundation	Solid/Continuous	Concrete	No Data

Briefly describe any outbuildings or secondary resources (such as barns, sheds, dam and mill pond, storage tanks, scales, railroad spurs, etc.), including their condition and their estimated construction dates.

A metal storage building (960 square feet) sits to the side of the building opposite of the creek and is assumed to have been constructed in 1990. A paved parking lot current abuts the building on the Tract Fork side.

### Property's History and Significance

In the space below, briefly describe the history of the property, such as significant events, persons, and/or families associated with the property. Please list all sources of information used to research the history of the property. (It is not necessary to attach lengthy articles or family genealogies to this form.)

If the property is important for its architecture, engineering, landscape architecture, or other aspects of design, please include a brief explanation of this aspect.

The history of the Calfee Training School, while local in scope, has themes which resonate on the state and national levels. One of those themes reflects the country's dominant narrative about segregation and Jim Crow - the disparity in educational opportunities afforded to African American and white students during the Jim Crow era. But a less dominant theme in the story we tell about ourselves as a country includes the strength of African American community investment and pride in their schools and students, in spite of the unequal funding and facilities. Another less obvious lesson that the story in Pulaski highlights well are the many ways that poor and working class whites have also been harmed by systems of racial segregation as evidenced by the poor facilities of the rural, white schools in Pulaski County pre-desegregation which served as the County's defense against legal claims of inferior facilities for African American students.

While all communities could tease these themes out of their own histories with proper effort, doing so in Pulaski is a somewhat more natural task because of a remarkable set of circumstances that involved a young and brave principal, a prominent and eventually successful lawsuit, a devastating school fire, and prominent attorney and future Supreme Court Justice Thurgood Marshall.

Originally called the Pulaski Graded School, the building that was to become the Calfee Training School was first utilized as a public school for African American children in the 1880s. In 1921, the School Board changed the name of the school to the Calfee Training School in part to honor Leander Calfee who had donated the land for the school and in part to indicate financial support from the Slater Fund. From 1882 to 1937, the Slater Fund disbursed \$4,000,000 in funds to similar training schools for African American children in counties throughout the US South, including the somewhat more well-known Christiansburg Institute in neighboring Montgomery County and the relatively acclaimed Hampton Normal and Agricultural and Tuskegee Normal and Industrial Institutes. It is worth noting that the Slater Fund took one side in an ongoing debate about African American education during this time period; the fund was opposed to a liberal education for African American students,

supporting instead industrial education devoted to training Black children in trades. Many on the other side of the debate believed that the Northern philanthropists were less interested in racial equality than they were in supporting a stabilized African American workforce in the US South.

It was against this backdrop that Chauncey Harmon returned to Pulaski after having graduated from the Tuskegee Institute and began teaching for the Pulaski County School System in 1937. In the summer of 1938, at 25 years of age, Harmon was named the principal of his alma mater, the Calfee Training School. What the school system likely didn't know when they appointed him to that position was that Harmon was already in correspondence with Thurgood Marshall of the NAACP Legal Defense Fund. Marshall had that summer begun a statewide search for a plaintiff in a lawsuit to equalize teacher salaries in Virginia. In November of that year, the Calfee Training School burned down in a fire, the origins of which were never officially determined. Shortly after the fire, a public argument ensued with Harmon and other African American community leaders on one side and Harmon's employers on the School Board on the other.

Interestingly for the times, Harmon was backed by many in the white community - including the local Southwest Times editorial board - in his quest for a new and improved school as well as a short-term alternate plan for classes to meet while the new school was being built. Even with that community support, the School Board did not immediately support Harmon's efforts to secure alternative spaces for educating African American children, nor did they respond favorably to subsequent petitions for equalization of salaries for the teachers or facilities for the students. In response, on behalf of Harmon and the teachers, the NAACP filed petitions with the school board demanding equalization of salaries and facilities in early 1939. Chauncey Harmon and another teacher, Willis Gravely, were named on the petitions, but they sought equal pay to their white counterparts on behalf of all black teachers. The Pulaski School Board rejected the petitions and instead decided to send high school aged black students to the historic Christiansburg Institute, located in neighboring Montgomery County. In the next months, the Board decided not to renew Harmon or Gravely's contracts even after petitions from the community demanded that they do so. Harmon left teaching for several years, but ultimately returned to education in neighboring Wythe County in 1944 where he helped build a modern school for black students in 1952.

In 1939, the Pulaski County School Board paid the Public Works Administration to rebuild the Calfee Training School in a lot across the street from the original school. They spent \$34,000 to build the current eight-room school building, but at the same time spent \$45,000 for a gymnasium and other minor additions down the street at Pulaski High School.

Unfortunately for the Pulaski County School Board, the firing of Chauncey Harmon did not stop local efforts to improve facilities for black students. In 1947, local families on behalf of their children sued the School Board over unequal elementary and high school facilities. In this case, the Pulaski children were represented by Oliver H. Hill, a legendary Richmond civil rights lawyer, who had won pay equalization cases in the eastern part of Virginia. He brought substantial evidence to the Court's attention including the 60-mile round trip bus ride between the Calfee School and the Christiansburg Institute. Photographs were submitted showing the vastly different quality of the gyms, classrooms, laboratories, typing rooms, and libraries. Despite the extensive evidence presented, the District Court judge held that no discrimination existed at either the elementary or high school level. The reasoning appeared to be simply that since some white students experienced school facilities so poor and buses so overcrowded that it was "shocking" meant that no discrimination could exist against black students. (*Corbin v. County School Board of Pulaski*, 84 F.Supp. 253 at 256).

The parents appealed and found a more receptive audience at the Fourth Circuit Court of Appeals. The Fourth Circuit's unanimous decision in 1949 focused on the differences between the high schools noting "glaring inequality" and that found "this discrimination is due to race and color." (*Corbin v. County School Board of Pulaski*, 177 F.2d 924 at 928.) The decision rejected both the findings of fact and law at the District Court. The decision

was one of the few successful equalization cases filed by the NAACP. After the win, the strategy for the NAACP shifted to the desegregation cases filed which ultimately led up to *Brown v. Board of Education*. Despite the enormous win for local black children, the Pulaski County School Board refused to build a high school for black children or significantly improve the Christiansburg Institute.

A 1995 dissertation by N. Wayne Tripp about Chauncey Harmon's short-lived career in Pulaski County has been a primary resource to the community in understanding the history. That dissertation was titled "Chauncey Depew Harmon, Senior: A Case Study in Leadership for Educational Opportunity and Equality in Pulaski, Virginia" and can be accessed at <https://vtechworks.lib.vt.edu/handle/10919/40002/>.

Additional information about *Corbin v. County School Board of Pulaski County (1949)* was accessed at [https://archives.lib.virginia.edu/repositories/4/archival\\_objects/3054](https://archives.lib.virginia.edu/repositories/4/archival_objects/3054).

**5. Property Ownership** (Check as many categories as apply):

## PHASE I ENVIRONMENTAL SITE ASSESSMENT

**Site Name:** Former Calfee School

**Site Address:** 1 Magnox Drive Pulaski, VA. Pulaski County PIN# 72-14-1

### INTERVIEW QUESTIONS: USER Questionnaire (adapted from Section X3 of ASTM E1527-013)

Please answer each question to the best of your ability to obtain the information. General answers will be more helpful than no information ("cannot recall").

Purpose: In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must conduct the following required inquiries. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

- (1.) Environmental liens that are filed or recorded against the *property* (40 CFR 312.25).** Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law? NOTE 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

*Not known*

- (2.) Activity and use limitations that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and vi)).** Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

*Not known*

- (3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).** Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

*No*

### ASTM E1537-13 USER QUESTIONNAIRE (Continued)

- (4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

No purchase price, donation

- (5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

- (a.) Do you know the past uses of the *property*?

offices

- (b.) Do you know of specific chemicals that are present or once were present at the *property*?

Not known

- (c.) Do you know of spills or other chemical releases that have taken place at the *property*?

Not known

- (d.) Do you know of any environmental cleanups that have taken place at the *property*?

Not at this location

- (6.) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

No

### INTERVIEW QUESTIONS: USER Questionnaire (adapted from Section X3 of ASTM E1527-013)

Please answer each question to the best of your ability to obtain the information. General answers will be more helpful than no information (“cannot recall”).

**Purpose:** In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “*Brownfields Amendments*”), the *user* must conduct the following required inquiries. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that “*all appropriate inquiries*” is not complete.

**(1.) Environmental liens that are filed or recorded against the *property* (40 CFR 312.25).** Did a search of *recorded land title records* (or judicial records where appropriate, see **Note 1** below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law? NOTE 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

No. We conducted a search and found no records of environmental liens on this property.

**(2.) Activity and use limitations that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and vi)).** Did a search of *recorded land title records* (or judicial records where appropriate, see **Note 1** above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

No.

**(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).** Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No.

### ASTM E1537-13 USER QUESTIONNAIRE (Continued)

**(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).** Does the purchase price being paid for this *property* reasonably

reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes.

**(5.) Commonly known or reasonably ascertainable information about the *property* (40 CFR 312.30).** Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

**(a.) Do you know the past uses of the *property*?**

**Yes. Most recently it was used as office space and before that as an educational facility.**

**(b.) Do you know of specific chemicals that are present or once were present at the *property*?**

No.

**(c.) Do you know of spills or other chemical releases that have taken place at the *property*?**

No

**(d.) Do you know of any environmental cleanups that have taken place at the *property*?**

No

**(6.) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).** Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

No

## Memorandum

---

**To:** Town of Pulaski  
**From:** Robby Kiser, Fire Chief, Pulaski Fire Department  
**Date:** 02/25/2021  
**Project Name:** Former Calfee School Site, 1 Magnox Drive, Pulaski, VA  
**Project Number:** B07226-11  
**Subject:** Interview for Phase I ESA – performed by Ryan Sadler, DAA  
**cc:** File

---

On February 25, 2021 at 3:00pm, Mr. Robby Kiser, Fire Chief, Pulaski Fire Department, was contacted via telephone (540-994-8663) regarding emergency response and petroleum or hazardous waste releases and or storage at the subject property and adjacent properties. Mr. Kiser has been with the Fire Department for 18 years. According to Mr. Kiser, the Fire Department has no records of fuel storage tanks located at the subject property and no records regarding chemicals stored, used, or disposed on the site. Mr. Kiser stated the Fire Department has not responded to the site as far as his records go back (2008) other than to help protect the building during flood events. He noted that during flood events water has made it up to the base of the building foundation. Mr. Kiser was not aware of any material storage, USTs, ASTs, or HAZMAT releases on the subject property.

Mr. Kiser stated that no responses have been made to the adjacent sites (including Kirby's) for HAZMAT incidences that he could recall.

No additional information was provided.

## Memorandum

---

**To:** Town of Pulaski  
**From:** Darlene Burcham, Town Manager, Town of Pulaski  
**Date:** 02/23/2021  
**Project Name:** Former Calfee School Site, 1 Magnox Drive, Pulaski, VA  
**Project Number:** B07226-11  
**Subject:** Interview for Phase I ESA – performed by Ryan Sadler, DAA  
**cc:** File

---

On February 23, 2021, at 1PM, Ms. Darlene Burcham, Town Manager for the Town of Pulaski and USEPA Brownfields Grantee Representative, was interviewed in her office to discuss her knowledge of the subject property. Ms. Burcham has been with the Town of Pulaski, Virginia for approximately a year and had little knowledge of the subject property beyond its former use as a School Building and offices for the Magnox industry. Ms. Burcham had no knowledge of present or former underground or above ground storage tanks, chemical use, storage, or disposal practices.

No additional information was provided.

## Memorandum

---

**To:** Town of Pulaski  
**From:** Mrs. Jill Williams  
**Date:** 02/23/2021  
**Project Name:** Former Calfee School Site - 1 Magnox Drive, Pulaski, VA  
**Project Number:** B07226-11  
**Subject:** Interview for Phase I ESA – performed by Ryan Sadler, DAA  
**cc:** File

---

On February 23, 2021 at 11:00am, Mrs. Jill Williams, Executive Director of the Calfee Community & Cultural Center (CCCC), was interviewed in person (540-509-0808) regarding historical use of the Site. Mrs. Williams has been involved with the subject property since 2018 and plans to take ownership of the site (CCCC) through a donation by the Town. She knew the history as the former Calfee School but did not know the exact details of use by Magnox other than office space and storage. She provided access to the former school building and the steel storage shed. She stated that the brick building at the southeast corner was a water pump station that had been recently carved out of the school parcel. Mrs. Williams was not aware of any hazardous material storage, USTs, ASTs, or HAZMAT releases on the subject property associated with former use. Ms. Williams did not know the former use of the western addition to the Calfee School.

No additional information was provided.

RE: CITY DIRECTORY RESEARCH  
Former Calfee School  
1 Magnox Drive Pulaski, VA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

**Search Criteria:**

0-400 of W. Main St  
0-400 of Magnox Drive

**Search Results Summary**

Closings And Delays

# Calfee Training School: Its hidden history and future purpose for the community

(WDBJ)  
By Katey Roshetko  
*Published: Oct. 17, 2018 at 8:43 AM EDT*  
    

In Pulaski, one school impacted its students beyond the classroom walls. Now its students are the ones making an impact on the school.

An old brick building in the heart of Pulaski has peeling paint and overgrown plants.

"It's a part of history," Pastor Gary Hash said, "It just had a profound impact upon life."

"Calfee School was truly a beacon at the time that it was built for African-Americans and the Pulaski Community," Guy Smith, one of the project's organizers, said.

When it was built in 1939, Smith said Calfee represented a safe haven for people to learn.

Pastor Gary Hash was a first grader at Calfee School in 1965.

"It was just a phenomenal opportunity for us to launch in life and preparedness, and the sense of commitment to the students was just absolutely amazing," Hash said.

Janet Johnson spent 7 years inside these halls.

"You learned how to exist outside of home and outside of church," Johnson said.

Yet, despite its impact, the school closed in 1966 as Pulaski County became integrated and Calfee School became forgotten.

Now, Guy Smith and the Calfee alumni have found a new purpose for the building- one that preserves its cultural history and serves the community.

"Our hope is that Calfee School will one, provide a childcare center and also, we want Calfee to hopefully have an African-American Museum," Smith said.

The executive director of the YMCA, Allison Hunter, says the building is the perfect place to expand their childcare services.

"Right now Pulaski County is known as a childcare desert," she said. "So when we started looking around, we looked at several old buildings and old properties but this one... there's something about it that just has great bones."

Bones that built strong people in the past and will continue to build strong people in the future.

"The time is right and there's so much excitement, you can just feel it," Johnson said.

Saturday, October 20th, Calfee Training School alumni are invited to attend an informational meeting and luncheon to discuss the Calfee Training School initiative. The initiative consists of repairing the building so that a museum, daycare, and office space for non-profit organizations may be available in Pulaski County.

Project organizers are looking for alumni to come, share stories, and provide any historical documentation that they may have from the time they attended.

The event goes from 11 a.m. to 1:30 p.m at the Department of Social Services (53 Commerce Street Pulaski, Virginia). There will be a brief presentation accompanied by a lunch.

# Calfee Training School: The Legacy Lives On

**2020 / [Issues Archive](#) / [Voices](#) / February 8, 2021**

Pulaski County is a place of rugged beauty. Thick forests and rolling hills stretch across its boundaries. At the foothills of mountainous peaks are small towns. Home to eight international businesses, advanced manufacturing constitutes the heart of

[HOME](#)[ACTION](#)[CULTURE](#)[LIFE](#)[VOICES](#)[SCHOLAR OF THE MONTH](#)[GET THE MAGAZINE](#)[+ MORE](#)

contrasts.

[SEARCH](#)[Subscribe](#)[Don't miss  
deliveries](#)[Subscribe](#)

Its land use and economy are the result of forward-thinking town administrators who, at the start of the industrial revolution, sought investment from Northern capitalists to leverage the area's rich natural resources to aid its recovery from the

[HOME](#)[ACTION](#)[CULTURE](#)[LIFE](#)[VOICES](#)[SCHOLAR OF THE MONTH](#)[GET THE MAGAZINE](#) [+ MORE](#)

hierarchy left its imprint on Pulaski's development as well. The legal strictures and social norms of racial segregation known as Jim Crow, relegated people of color to attend certain schools, work certain jobs, worship in certain churches and live in certain sections of town. The schemes and machinations ordinary people used to prop-up or dismantle how the human race was artificially divided on the basis of skin color reflect the ways Pulaski County embraced or rejected the full citizenship of African Americans. Unknown to most people, is a fascinating story about the role a group of citizens from the Town of Pulaski played in the Civil Rights struggle for Black people in Virginia's public education during the mid-20<sup>th</sup> century.

This story, rich with characters and complex plot twists, centers around Calfee Training School – an academic institute for African American students – and its faculty between the period of 1937-1966. Like most histories, it begins with people's response to social forces outside their control; but that's not where it ends. The first part outlines how key people initiated change regarding what students of color were taught and how teachers of color were treated during and after Jim Crow. The second part reveals an innovative plan currently in development to use the legacy and building of Calfee School to expand the educational, cultural and community services offered to all Pulaski County residents.

What follows are excerpts from an excellent doctoral dissertation submitted in 1995 to the faculty of Virginia Tech by N. Wayne Tripp titled, "Chauncey Depew Harmon, Senior: A Case Study in Leadership for Educational Opportunity and Equality in Pulaski, Virginia" intertwined with vignettes and insights shared by current and former Pulaski residents during interviews conducted in December as they reflected on the impact of Calfee Training School and their hopes for how the defunct building can be used to further their vision for a new kind of 21st century education.

## PART 1

*"The past is not a place for the squeamish. You cannot hug your way through history, and it is a mistaken idea to try."*

Professor Sir David Cannadine

*Dethroning Historical Reputations (2018)*

The story begins with Chauncey Harmon, an African American educator, trained at Tuskegee Institute, who served as both a teacher and principal of Calfee Training School between 1937-39. During her interview, Marylen Harmon, a retired teacher from Salem and the only daughter of Chauncey Harmon, described her father as a man acutely sensitive to issues of social justice. Born in 1913, Chauncey demonstrated independence and forthrightness from a young age. His father was a barber; his mother provided domestic services to white families in town. Marylen shared, "Chauncey's job at age five was to take his red wagon into town to Mr. Roberts' house and retrieve their laundry for his mother to wash, then return the clean clothes to the family when she was done."

Roberts had a son named Tom who was Chauncey's age. The boys were best friends. When they turned seven, Mrs. Roberts grew concerned regarding their closeness and told her son that going forward, Chauncey would have to call him, "Mr. Tom." A few days passed. Mrs. Roberts noticed Tom appeared melancholy. The

Chauncey told his mother: "If I have to call him 'Mr. Tom,' then he has to call me Mr. Chauncey. And if he doesn't, I'm not playing with him." Such was the cleave racial segregation wrought. At that time (generally), Black men and women in the south were not addressed by their title but by their first name, their position or an assigned name like Boy or Mamie; Negroes were expected to address white people by their titles. Mrs. Roberts' command was a request of submission from her son's negro friend. Chauncey Harmon refused to comply.

Marylen said, "Mrs. Roberts' relented....The boys were free to play together again; no strings attached. At my father's funeral in 1993, Tom Roberts came to honor his passing." Such was the depth of Chauncey Harmon's conviction – even as a young boy – to defend what he believed in, that the incident serves as his origin story for the actions he would later take as a man.

\*\*\*

Formulation of the Commonwealth's Constitution in 1902 implemented several strategies designed to disenfranchise African Americans despite passage of the 14<sup>th</sup> Amendment to the U.S. Constitution in 1868 which states:

Section 140 of Virginia's 1902 Constitution stated: "White and colored children shall not be taught in the same school," codifying the principle of separate but equal set forth by the U.S. Supreme Court in their 1896 decision of Plessy v. Ferguson. This law and others legalized racial segregation in public and private accommodations, creating a duality in everyday life that was neither equal nor practical. For African Americans and sympathetic whites, the question then for decades was not *how* racial segregation would be managed, but *when* and *where* this system of racial hierarchy would be broken.

\*\*\*

In Southwest Virginia, though public education for African American children began as early as 1868 (in Pulaski it started in 1880), most of the schools they attended were one- and two-room structures, inadequate to meet their needs. Well into the 1930s, as a rule, African American teachers were paid less than their white peers. They had fewer teaching supplies. Textbooks were usually secondhand. Student transportation was not provided. And though exceptions existed, generally Black educators and their students were deliberately denied equal environs and rewards to teach and learn compared to their white peers. Because of this, by 1936, Pulaski's School Board was under pressure. A noted Black physician and Pulaski businessman, Dr. P.C. Corbin, had joined with other influential African Americans to demand Calfree Training School get accredited and extend its instruction through high school, so their children and others could receive the same training white students got. The superintendent acquiesced and hired three new teachers. Chauncey Harmon was one of them.

When he began the 1937-38 school year, Calfee Training School had an enrollment of 250 students. They were housed in a 43-year-old dilapidated building consisting of eight rooms. No cafeteria. No auditorium. Yet, what the faculty of eight lacked in supplies, they made up for in their determination that all their students would succeed. This shared sense of purpose bound teachers to their students for the entirety of the school's existence. So much so, that when Leon Russell, a Calfee alum and current Chairman of the NAACP National Board of Directors, recounted his time at Calfee, he could name *every* teacher he had from over 60 years ago.

In November 1937, Chauncey Harmon attended a conference for the Virginia State Teachers Association, an august body dating back to 1887 with a history of advancing the professional development of African American educators. While there, he heard Thurgood Marshall, then Assistant Special Counsel for the NAACP, give a speech about a lawsuit the civil rights organization initiated in Montgomery County, MD, demanding negro teachers' salaries be equal to those of white teachers. The lawsuit was part of a broader pressure strategy the NAACP was employing to expand the fight for equal pay for Blacks to other states throughout the South. By June 1938, Chauncey Harmon had secretly volunteered to participate, and became the first plaintiff for an equalization lawsuit in Virginia, originating in Pulaski County.

outstanding achievement for a man of 25. His joy was short-lived. Two months later, a fire destroyed the school. The cause, no one ever concluded. Likely the building's hazardous condition. Dr. Corbin, Rev. T.G. Howard and other backers for progressive change saw its destruction as an opportunity to rebuild and level the educational playing field between whites and Blacks. Pulaski's School Board viewed the disaster differently. The fire provided an excuse to offload Harmon and anyone else who disrupted the status quo. By then, school officials knew Harmon and five other teachers were plaintiffs in two NAACP equalization lawsuits; one regarding teachers' salaries, the other regarding inadequate facilities. If there was no school building and Calfee students were redistributed, then high school expansion would not be needed. Harmon could be dismissed, along with his troublesome sidekick Willis Gravely, another plaintiff and Calfee teacher. A power struggle ensued. By 1939, both sides got what they wanted. Harmon and Gravely were fired. The NAACP lawsuit went forward. Calfee elementary students were placed in temporary quarters to continue their lessons until the new school building Corbin and Howard wanted was constructed, and the county's Negro high school students were bused to Christiansburg Institute for instruction.

\*\*\*

Fast forward 28 years to 1966. A beautiful, dearly loved, second grade teacher named Dorothy DeBerry Venable faced a choice. Pulaski County Schools had fully racially integrated. Calfee School was closed. Its teachers that summer had not received their employment contracts. Instead, they were told to report to the school board's administration building for their assignments. Venable heard that every Calfee School teacher (and its principal) had effectively been demoted; offered an assistant position to white teachers in other schools. She was furious and uncertain what to do regarding her own employment contract. During her interview, Venable explained:

refused to accompany me inside. I had to do it for myself. The Superintendent asked me: 'Do you feel being an assistant is a demotion?' I said, 'Yes.'" She became the only black Calfee teacher given full classroom duties that year. "I was assigned First Grade at Jefferson School." Venable said.

In response to her story, Guy Smith, the son of Calfee School alumni and the current Director of Social Services in Pulaski, added: "Ms. Venable continued teaching at Jefferson School another 32 years before retiring. She was my teacher, one of only three African American educators I had while growing up before attending Virginia Tech. What I learned from them and my parents, was the importance of courage and being a trailblazer; life lessons all children should learn, regardless of race." Smith concluded: "Calfee School had a radiating effect in Pulaski. What we want now is to honor the past while preparing for the future."

## PART 2

*"Education . . . is a preparation for the competition of life."*

– Charles Houston, Dean (1929-35)

in Conflict Resolution from Ohio's Antioch University, a few years ago she returned to the New River Valley to live with her husband and young son. It was then she discovered the paucity of child care available to parents of preschool-aged children. According to statistics provided by the Kids Count Data Center from the Annie E. Casey Foundation, Pulaski County currently has licensed childcare spots for only 8.5 percent of children under the age of six, leaving nearly 1,500 children without licensed childcare. This deficit puts Pulaski children's readiness to enter Kindergarten at risk. Williams wrote in a follow-up email: "Though some percentage of preschoolers are cared for by family members as a matter of choice, we know from parent and employer surveys there's a significant need for more quality childcare in the county."

Williams and Mickey Hickman, Chairman of Calfee Community & Cultural Center's Board of Directors, intend to tackle that gap with the board's ambitious plans for how Calfee School's old building at the intersection of Corbin-Harmon Drive (formerly Magnox) and Altoona Road will be renovated for a new era. Hickman said, "Erecting the Lucy & Chauncey Harmon Learning Center there will provide services for children age six-weeks to five-years- old (and out of school care for kids Grades K-6). Other components include a **museum**; a **community kitchen**; an **events center and meeting space**; a **learning laboratory**, where people can receive training in new technologies; and **two outdoor spaces** to serve as "nature's classroom" for participating youth. Their vision is being realized through an alliance of public and private interests united in a shared goal to meet the felt needs of Pulaski's community. Their ingenuity is paving the way for a prosperous 21<sup>st</sup> century.

Jill Williams shared the perfect ending to the story of Calfee Training School. It involved her son, Oscar Reis, a lively, thoughtful seven-year-old. "When Oscar was in first grade, I went to pick him up from his afterschool program. Upon my arrival, his teacher shared he had gotten in a fight that day with a fifth grader. After breaking up the fisticuffs, she took Oscar aside to ask what happened. Oscar replied: 'He wouldn't acknowledge that George Washington owned slaves!' The

A segregated school in a small, southwestern Virginia town, burned down in 1938. No cause for the fire was ever established. But from its ashes came a little-known court case that would pre-sage Brown vs. The Board of Education: The decision declaring segregation unconstitutional.

Many people in Pulaski didn't know the story of how their town was instrumental in the fight for racial equality, until now.

[https://mediad.publicbroadcasting.net/p/wvtf/files/styles/x\\_large/public/202002/81502541\\_25312348371](https://mediad.publicbroadcasting.net/p/wvtf/files/styles/x_large/public/202002/81502541_25312348371)

*Students of the Calfee Training School in Pulaski, which is getting its due as an important plank in the platform of racial equality*

Listen

3:58

*Robbie Harris reports*

In the 1940s Dorothy Venable was a teacher at the Calfee Training School in the town of Pulaski. She says teachers from the African American school were never invited to meetings that white teachers attended, but this one-time, she wasn't having it.

"And so, I went in and Miss Eva Vawn was the supervisor and she looked at me as if to say—Pffff!— the room was full of teachers, so what can she say? She couldn't embarrass me and get away with it."

It was one tiny salvo across the bow of segregation, and Venable got to bring back the *good* school supplies for her pupils in Pulaski. Gary Hash was a young student at Calfee in the early 1960s.

"I believe that the teachers understood the challenges that were in front of us and they brought that to the table. It was not just about the classroom. We're getting these kids ready for this life that they're facing. "

A life of closed doors and unequal opportunities. In Pulaski, formal education for African Americans ended at Junior High.

"It was deliberate back then that black students would only go to the ninth grade." Mickey Hickman is a Calfee school alumnus. "This is the political science historian in me; when I read about our situation here in that, they didn't want black students going higher than the ninth grade, so that would track them to lower wage jobs." With no high school for African Americans in Pulaski, Hickman attended high school in the town of Christiansburg, where he earned a graduate degree.

But years earlier, in 1929, when there were no options for him to continue his education in his hometown, a young man named Chauncey Harmon, was accepted to go straight to college at the Tuskegee Institute in Alabama, where he studied with George Washington Carver. Two decades later, Harmon became principal of Calfee. He was disturbed by what he saw back home, and quickly started a petition for equal facilities and equal pay in Pulaski. Dr. Marylen Harmon is the late Chauncey Harmon's daughter.

"He had African American as well as whites (with him) and for many of them it was, as long as they're not coming to us, let them have what they want." And some whites, she says, supported the idea because it opened their eyes to racial inequality in their county.

"Mr. Harmon, was involved with one of the earliest efforts in civil rights."

Wayne Tripp wrote his dissertation at Virginia Tech on Harmon's little-known fight for educational opportunity and equality in Pulaski and a lawsuit filed on the issue in 1947. It was one of the earliest challenges to racial segregation in schools. But only recently, have these efforts been recognized

as precursors to *Brown vs. the Board of Education*, the landmark case filed by Thurgood Marshall, who would later join the U.S. Supreme Court.

“And it was interesting to me, when I got started in this, I thought, eh? But the more I dug into it and the more I read, I mean, clearly it was there. Can you connect Thurgood Marshall to Mr. Harmon's work and Calfee school, yes, you definitely can.”

Again, Marylen Harmon.

“We found handwritten letters at the Library of Congress, written from my dad to Thurgood Marshall, about the lawsuit.”

In 1949 they won the case, filed by Pulaski Physician, Percy Corbin, 5 years before ‘*Brown vs. the Board*.’

“I've been here for soon to be 61 years and a year and a half ago I heard for the first time in my life the story of Chauncey Harmon and the lawsuit”.

Dave Clark is the Mayor of the town of Pulaski.

“I had no idea because I was told what I was supposed to hear. And the fact that, that was the groundbreaking thing that started the process for *Brown vs the Board of Education*, happened right here in my town.”

After the first Calfee school burned, The Public Works Administration built a new Calfee school in 1940, where the old one had stood. Principle Harmon was not offered a contract to return. His daughter says he never talked about it. No one did. Now, Pulaski is fundraising to turn the former Calfee school into a community and childcare center with a museum commemorating the town's role in the fight for racial equality.

Again, Calfee teacher, Dorothy Venable. “It makes me feel real good that they're going to use it for the community. That everybody, not certain people will be able to use it, but that even people who are low economic people, black people, white people, anybody who needs the services of, what's going to go on in this building will be able to use it.”

Pulaski county schools were not desegregated until the late 60s, and people say integration, well, that was another matter altogether. Calfee closed in 1966, more than a decade after the landmark *Brown vs. the Board of Education* case made segregation unconstitutional.

## **Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY**

**Reliance on information in Report:** This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

**License for use of information in Report:** No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

**Your Liability for misuse:** Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

**No warranty of Accuracy or Liability for ERIS:** The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

**Trademark and Copyright:** You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

# Executive Summary

## Property Information:

**Project Property:** *Former Calfee School  
1 Magnox Drive Pulaski VA 24301*

**Project No:** *B07226-11 03/05*

**Coordinates:**

<b>Latitude:</b>	<i>37.04850855</i>
<b>Longitude:</b>	<i>-80.78671592</i>
<b>UTM Northing:</b>	<i>4,100,274.87</i>
<b>UTM Easting:</b>	<i>518,965.13</i>
<b>UTM Zone:</b>	<i>UTM Zone 17S</i>

**Elevation:** *1,915 FT*

## Order Information:

**Order No:** *21021600302*

**Date Requested:** *February 16, 2021*

**Requested by:** *Draper Aden Associates*

**Report Type:** *Database Report*

#### Violation/Evaluation Summary

**Note:** NO VIOLATIONS: All of the compliance records associated with this facility (EPA ID) indicate NO VIOLATIONS; Compliance Monitoring and Enforcement table dated Oct, 2020.

#### Evaluation Details

**Evaluation Start Date:** 20110224  
**Evaluation Type Description:** COMPLIANCE EVALUATION INSPECTION ON-SITE  
**Violation Short Description:**  
**Return to Compliance Date:**  
**Evaluation Agency:** State

#### Handler Summary

**Importer Activity:** No  
**Mixed Waste Generator:** No  
**Transporter Activity:** No  
**Transfer Facility:** No  
**Onsite Burner Exemption:** No  
**Furnace Exemption:** No  
**Underground Injection Activity:** No  
**Commercial TSD:** No  
**Used Oil Transporter:** No  
**Used Oil Transfer Facility:** No  
**Used Oil Processor:** No  
**Used Oil Refiner:** No  
**Used Oil Burner:** No  
**Used Oil Market Burner:** No  
**Used Oil Spec Marketer:** No

#### Hazardous Waste Handler Details

**Sequence No:** 1  
**Receive Date:** 19800818  
**Handler Name:** SHERWIN-WILLIAMS CO THE  
**Federal Waste Generator Code:** N  
**Generator Code Description:** Not a Generator, Verified  
**Source Type:** Notification

Description History:	The property was developed in the 1940s-1950s by the Town of Pulaski as the Town Shops. Currently the property serves as the location of the Town's Public Works Department which includes the Town Shops and offices and chemical and equipment storage associated with the Street maintenance Department, Landfill maintenance, Cemeteries maintenance, Motor Vehicle and Town Equipment Maintenance Division, and General Property Maintenance Division including property maintenance, repairs and janitorial services. The facility also houses the Town's Motor Pool. Operations performed at the property include repairs and maintenance of Town vehicles and equipment.					
Radius:	.5					
Ready for Reuse Ind:	Yes

Description History:	The property was developed in the early 1900s previously referred to by other names and ownerships including Paul Knitting Mills and Kahn & Feldman-Jefferson Mills. The primary industrial operation was textile products manufacturing. Jefferson Yarns currently consists of two plants single owner and generally considered a single overall operational entity, the Main Plant and the Hill Plant. Operations continue in the Main Plant, whereas operations have ceased in the Hill Plant. The Hill Plant property is currently unused and consists of two former industrial buildings and a parking lot.					
Radius:	.5					
Ready for Reuse Ind:	No

#### Violation/Evaluation Summary

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	----------------------	-----------	---------------------	-------------------	------	----

**Note:** VIOLATION or UNDETERMINED: There are VIOLATION or UNDETERMINED details or records associated with this facility (EPA ID) in the Compliance Monitoring and Enforcement table dated Oct, 2020.

#### Violation Details

**Citation:**  
**Violation Short Description:** Used Oil - Generators  
**Violation Type:** 279.C  
**Violation Determined Date:** 20160719  
**Scheduled Compliance Date:** 20160919  
**Return to Compliance:** Observed  
**Actual Return to Compl:** 20160719  
**Violation Responsible Agency:** State

#### Enforcement Details

**Enforcement Type:** 110  
**Enforcement Type Description:** VERBAL INFORMAL  
**Enforcement Action Date:** 20160811  
**Enf Disposition Status:**  
**Disposition Status Date:**  
**Enforcement Lead Agency:** State  
**Proposed Penalty Amount:**  
**Final Amount:**  
**Paid Amount:**

#### Evaluation Details

**Evaluation Start Date:** 20160719  
**Evaluation Type Description:** COMPLIANCE EVALUATION INSPECTION ON-SITE  
**Violation Short Description:** Used Oil - Generators  
**Return to Compliance Date:** 20160719  
**Evaluation Agency:** State

**Evaluation Start Date:** 20011024  
**Evaluation Type Description:** NON-FINANCIAL RECORD REVIEW  
**Violation Short Description:**  
**Return to Compliance Date:**  
**Evaluation Agency:** State

#### Handler Summary

**Importer Activity:** No  
**Mixed Waste Generator:** No  
**Transporter Activity:** No  
**Transfer Facility:** No  
**Onsite Burner Exemption:** No  
**Furnace Exemption:** No  
**Underground Injection Activity:** No  
**Commercial TSD:** No  
**Used Oil Transporter:** No  
**Used Oil Transfer Facility:** No  
**Used Oil Processor:** No  
**Used Oil Refiner:** No  
**Used Oil Burner:** No  
**Used Oil Market Burner:** No  
**Used Oil Spec Marketer:** No

#### Hazardous Waste Handler Details

## Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:*

*"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."*

### Standard Environmental Record Sources

#### Federal

##### Facility Response Plan:

FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

**Government Publication Date:** Mar 26, 2020

##### National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

**Government Publication Date:** Dec 30, 2020

##### National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

**Government Publication Date:** Dec 30, 2020

##### Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

**Government Publication Date:** Dec 30, 2020

##### SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

**Government Publication Date:** Oct 28, 2020

##### SEMS List 8R Archive Sites:

SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

**Government Publication Date:** Oct 28, 2020

#### **Inventory of Open Dumps, June 1985:**

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

**Government Publication Date: Jun 1985**

#### **Comprehensive Environmental Response, Compensation and Liability Information System -**

CERCLIS

##### **CERCLIS:**

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

**Government Publication Date: Oct 25, 2013**

#### **EPA Report on the Status of Open Dumps on Indian Lands:**

IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

**Government Publication Date: Dec 31, 1998**

#### **CERCLIS - No Further Remedial Action Planned:**

CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

**Government Publication Date: Oct 25, 2013**

#### **CERCLIS Liens:**

CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Jan 30, 2014**

#### **RCRA CORRACTS-Corrective Action:**

RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

**Government Publication Date: Oct 19, 2020**

#### **RCRA non-CORRACTS TSD Facilities:**

RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

**Government Publication Date: Oct 19, 2020**

#### **RCRA Generator List:**

RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

**Government Publication Date: Oct 19, 2020**

**RCRA Small Quantity Generators List:**[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

**Government Publication Date: Oct 19, 2020**

**RCRA Very Small Quantity Generators List:**[RCRA VSQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

**Government Publication Date: Oct 19, 2020**

**RCRA Non-Generators:**[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

**Government Publication Date: Oct 19, 2020**

**Federal Engineering Controls-ECs:**[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Aug 26, 2020**

**Federal Institutional Controls- ICs:**[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

**Government Publication Date: Aug 26, 2020**

**Emergency Response Notification System:**[ERNS 1982 TO 1986](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date: 1982-1986**

**Emergency Response Notification System:**[ERNS 1987 TO 1989](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date: 1987-1989**

**Emergency Response Notification System:**[ERNS](#)

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

**Government Publication Date: Nov 9, 2020**

**The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:**

**FED BROWNFIELDS**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Jan 6, 2021**

**FEMA Underground Storage Tank Listing:**

**FEMA UST**

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

**Government Publication Date: Dec 31, 2017**

**Petroleum Refineries:**

**REFN**

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

**Government Publication Date: Jul 10, 2020**

**Petroleum Product and Crude Oil Rail Terminals:**

**BULK TERMINAL**

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

**Government Publication Date: Apr 28, 2020**

**LIEN on Property:**

**SEMS LIEN**

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

**Government Publication Date: Oct 28, 2020**

**Superfund Decision Documents:**

**SUPERFUND ROD**

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

**Government Publication Date: Sep 22, 2020**

**State**

**Solid Waste Landfills:**

**SWF/LF**

The solid waste program in the Department of Environmental Quality (DEQ) is designed to encourage the reuse and recycling of solid waste and to regulate the disposal and treatment of solid waste, including regulated medical waste, and to ensure that hazardous waste is properly managed. Standards are designed to protect human health and the environment and driven by regulatory requirements.

**Government Publication Date: Jul 6, 2020**

**Leaking Petroleum Storage Tanks:**

**LST**

When a release occurs from an aboveground or underground storage tank, the owner and/or operator of the tank is required to report the release to the Department of Environmental Quality (DEQ). This database contains a listing of releases from tanks both above and underground.

**Government Publication Date: Jan 5, 2021**

**Delisted Leaking Petroleum Storage Tanks:**

**DELISTED LST**

Facilities which have been removed from the list of leaking petroleum storage tanks made available by the Virginia Department of Environmental Quality (DEQ). Facilities may be removed from the lists of leaking petroleum tanks when it is determined that the release reported is not an actual release, or the released substance is not petroleum - these sites may still have endured non-petroleum hazardous substance releases.

**Government Publication Date: Jan 5, 2021**

**Underground Storage Tanks:**

UST

A listing of registered underground storage tanks, made available by the Virginia Department of Environmental Quality (DEQ). Includes records from Tank Registration files as well as records from the Virginia DEQ Open Data Portal.

**Government Publication Date:** Jan 5, 2021

**Aboveground Storage Tanks:**

AST

Virginia Department of Environmental Quality (DEQ). Includes records from Tank Registration files as well as records from the Virginia DEQ Open Data Portal.

**Government Publication Date:** Jan 5, 2021

**Storage Tank Facilities:**

TANK

A list of tank facilities where tank details are not available. This list is made available by the Virginia Department of Environmental Quality (DEQ). Includes records from Tank Registration files as well as records from the Virginia DEQ Open Data Portal.

**Government Publication Date:** Jan 5, 2021

**Delisted Tanks:**

DELISTED TANK

Facilities which have been removed from the list of registered aboveground and/or underground storage tanks made available by the Virginia Department of Environmental Quality (DEQ). Facilities may be removed from the lists of registered tanks when it is determined that the tank does not require registration, for example, due to capacity or contents.

**Government Publication Date:** Jan 5, 2021

**Institutional Controls:**

INST

Institutional controls are legal or contractual restrictions on property use that remain effective after remediation is completed and are used to satisfy remediation levels. This list is maintained by the Department of Environmental Quality (DEQ).

**Government Publication Date:** Dec 30, 2020

**Voluntary Remediation Program:**

VRP

The Voluntary Remediation Program is to encourage hazardous substance cleanups that might not otherwise take place. The program is a streamlined mechanism for site owners or operators to voluntarily address contamination at sites with concurrence from the Department of Environmental Quality (DEQ).

**Government Publication Date:** Dec 30, 2020

**Brownfields Site Specific Assessments:**

BROWNFIELDS

Brownfields are idled, underutilized, or abandoned industrial or commercial properties where expansion or redevelopment is complicated by real or perceived environmental contamination. Examples include factories, railyards, landfills, dry cleaners, etc. This list is maintained by the Department of Environmental Quality (DEQ).

**Government Publication Date:** Jun 26, 2020

**Tribal****Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands:**

INDIAN LUST

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands in EPA Region 3, which includes Virginia. There are no LUST records in Virginia at this time.

**Government Publication Date:** Apr 12, 2019

**Underground Storage Tanks (USTs) on Indian Lands:**

INDIAN UST

Listing of Underground Storage Tanks (USTs) on Tribal/Indian Lands in EPA Region 3, which includes Virginia. There are no UST records in Virginia at this time.

**Government Publication Date:** May 4, 2018

**Delisted Tribal Leaking Storage Tanks:**

DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

**Government Publication Date:** Apr 14, 2020

**Delisted Tribal Underground Storage Tanks:**

DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

## **County**

**No County standard environmental record sources available for this State.**

## **Additional Environmental Record Sources**

### **Federal**

#### **PFOA/PFOS Contaminated Sites:**

[PFAS NPL](#)

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

**Government Publication Date: Nov 18, 2020**

#### **Facility Registry Service/Facility Index:**

[FINDS/FRS](#)

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

**Government Publication Date: Nov 2, 2020**

#### **Toxics Release Inventory (TRI) Program:**

[TRIS](#)

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

**Government Publication Date: Feb 19, 2020**

#### **Perfluorinated Alkyl Substances (PFAS) Releases:**

[PFAS TRI](#)

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

**Government Publication Date: Feb 19, 2020**

#### **Perfluorinated Alkyl Substances (PFAS) Water Quality:**

[PFAS WATER](#)

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

**Government Publication Date: Jul 20, 2020**

#### **Hazardous Materials Information Reporting System:**

[HMIRS](#)

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

**Government Publication Date: Sep 1, 2020**

#### **National Clandestine Drug Labs:**

[NCDL](#)

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

**Government Publication Date: Oct 5, 2020**

#### **Toxic Substances Control Act:**

[TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

**Government Publication Date:** Apr 11, 2019

**Hist TSCA:**

[HIST TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

**Government Publication Date:** Dec 31, 2006

**FTTS Administrative Case Listing:**

[FTTS ADMIN](#)

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

**Government Publication Date:** Jan 19, 2007

**FTTS Inspection Case Listing:**

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

**Government Publication Date:** Jan 19, 2007

**Potentially Responsible Parties List:**

[PRP](#)

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

**Government Publication Date:** Dec 30, 2020

**State Coalition for Remediation of Drycleaners Listing:**

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

**Government Publication Date:** Nov 08, 2017

**Integrated Compliance Information System (ICIS):**

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

**Government Publication Date:** Jan 6, 2021

**Drycleaner Facilities:**

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

**Government Publication Date:** Jan 20, 2020

**Delisted Drycleaner Facilities:**

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

**Government Publication Date:** Jan 20, 2020

**Formerly Used Defense Sites:**

FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

**Government Publication Date:** Jan 28, 2020

**PHMSA Pipeline Safety Flagged Incidents:**

PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

**Government Publication Date:** Jul 7, 2020

**Material Licensing Tracking System (MLTS):**

MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

**Government Publication Date:** Aug 5, 2020

**Historic Material Licensing Tracking System (MLTS) sites:**

HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

**Government Publication Date:** Jan 31, 2010

**Mines Master Index File:**

MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

**Government Publication Date:** Nov 3, 2020

**Alternative Fueling Stations:**

ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

**Government Publication Date:** Jan 18, 2021

**Registered Pesticide Establishments:**

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

**Government Publication Date:** Mar 31, 2020

**Polychlorinated Biphenyl (PCB) Notifiers:**

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

**Government Publication Date:** Nov 19, 2020

**State****Spills:**

SPILLS

The Department of Environmental Quality (DEQ) Pollution Response Program (PREP), provides for responses to air, water and waste pollution incidents in order to protect human health and the environment. PREP staff often work to assist local emergency responders, other state agencies, federal agencies, and responsible parties, as may be needed, to manage pollution incidents. Oil spills, fish kills, and hazardous materials spills are examples of incidents that may involve the DEQ's PREP Program.

**Government Publication Date:** Feb 1, 2021

**Pollution Complaint:**

[PC SPILLS](#)

The database contains a listing of Pollution Complaints from 1986 to 1994 that include petroleum releases and other releases on state land and waters. This list is maintained by the Department of Environmental Quality (DEQ).

**Government Publication Date: 1986-1994**

**Dry Cleaning Facilities:**

[DRYCLEANERS](#)

A listing of registered drycleaners maintained by the Department of Environmental Quality.

**Government Publication Date: Jan 15, 2021**

**Tribal**

**No Tribal additional environmental record sources available for this State.**

**County**

**No County additional environmental record sources available for this State.**

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

## Property Information

Order Number: 21021600302p  
Date Completed: February 16, 2021  
Project Number: B07226-11 03/05  
Project Property: Former Calfee School  
1 Magnox Drive Pulaski VA 24301  
Coordinates:  
Latitude: 37.04850855  
Longitude: -80.78671592  
UTM Northing: 4100274.87096 Meters  
UTM Easting: 518965.1288 Meters  
UTM Zone: UTM Zone 17S  
Elevation: 1,915.33 ft  
Slope Direction: WSW

Topographic Information.....	2
Hydrologic Information.....	4
Geologic Information.....	7
Soil Information.....	9
Wells and Additional Sources.....	17
Summary.....	18
Detail Report.....	19
Radon Information.....	29
Appendix.....	30
Liability Notice.....	32

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

### Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

# Topographic Information

**Current USGS Topo (2016)**

**Quadrangle(s): Pulaski, VA**

**Source: USGS 75 Minute Topographic Map**

## Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

Topographic information at project property:

Elevation: 1,915.33 ft  
Slope Direction: WSW

# Hydrologic Information

## Wetland

This map shows wetland existence using data from US Fish & Wildlife. Data coverage is shown to the right. Gray indicates no data available in the area.

- |                                   |                 |
|-----------------------------------|-----------------|

### Flood Zone X-12

Zone:	X
Zone subtype:	AREA OF MINIMAL FLOOD HAZARD

**Geologic Information**

**Geologic Units**

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

## Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

---

### Geologic Unit [e

Unit Name:	Elbrook Formation
Unit Age:	Cambrian
Primary Rock Type:	dolostone (dolomite)
Secondary Rock Type:	limestone
Unit Description:	Elbrook Formation - Dolomite, shale, and minor limestone.

---

### Geologic Unit Mm

Unit Name:	Maccrady Shale
Unit Age:	Mississippian
Primary Rock Type:	shale
Secondary Rock Type:	siltstone
Unit Description:	Maccrady Shale - Dusky-red and green shale and mudstone; and evaporite deposits.

---

### Geologic Unit Mpr

Unit Name:	Price Formation
Unit Age:	Mississippian
Primary Rock Type:	sandstone
Secondary Rock Type:	shale
Unit Description:	Price Formation - Sandstone, conglomeratic sandstone, and shale with carbonaceous partings and impure coal beds.

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

## Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

### Map Unit 12B (0.46%)

Map Unit Name:	Groseclose-Urban land complex, 2 to 7 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Groseclose(60%)	
horizon H1(0cm to 20cm)	Silt loam
horizon H2(20cm to 157cm)	Clay
horizon H3(157cm to 170cm)	Silty clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 12B - Groseclose-Urban land complex, 2 to 7 percent slopes

Component: Groseclose (60%)

The Groseclose component makes up 60 percent of the map unit. Slopes are 2 to 7 percent. This component is on hills on uplands. The parent material consists of residuum weathered from limestone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria.

Component: Urban land (35%)

Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

### Map Unit 12C (5.34%)

Map Unit Name:	Groseclose-Urban land complex, 7 to 15 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Groseclose(60%)	
horizon H1(0cm to 20cm)	Silt loam
horizon H2(20cm to 157cm)	Clay
horizon H3(157cm to 170cm)	Silty clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 12C - Groseclose-Urban land complex, 7 to 15 percent slopes

Component: Groseclose (60%)

The Groseclose component makes up 60 percent of the map unit. Slopes are 7 to 15 percent. This component is on hills on uplands.

## Soil Information

The parent material consists of residuum weathered from limestone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria.

Component: Urban land (35%)

Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

### Map Unit 14C (7.55%)

Map Unit Name:	Klinesville-Berks channery silt loams, 7 to 15 percent slopes
Bedrock Depth - Min:	36cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

Klinesville(55%)

horizon H1(0cm to 5cm)	Channery silt loam
horizon H2(5cm to 36cm)	Very channery silt loam
horizon H3(36cm to 61cm)	Bedrock

Berks(35%)

horizon H1(0cm to 18cm)	Channery silt loam
horizon H2(18cm to 69cm)	Very channery silt loam
horizon H3(69cm to 79cm)	Bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 14C - Klinesville-Berks channery silt loams, 7 to 15 percent slopes

Component: Klinesville (55%)

The Klinesville component makes up 55 percent of the map unit. Slopes are 7 to 15 percent. This component is on hills on uplands. The parent material consists of residuum weathered from shale and siltstone. Depth to a root restrictive layer, bedrock, lithic, is 10 to 20 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria.

Component: Berks (35%)

The Berks component makes up 35 percent of the map unit. Slopes are 7 to 15 percent. This component is on -- Error in Exists On --. The parent material consists of residuum weathered from shale and siltstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria.

### Map Unit 14F (11.36%)

Map Unit Name:	Klinesville-Berks channery silt loams, 30 to 65 percent slopes
Bedrock Depth - Min:	36cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

## Soil Information

### Klinesville(55%)

horizon H1(0cm to 5cm)	Channery silt loam
horizon H2(5cm to 36cm)	Very channery silt loam
horizon H3(36cm to 61cm)	Bedrock

### Berks(35%)

horizon H1(0cm to 18cm)	Channery silt loam
horizon H2(18cm to 69cm)	Very channery silt loam
horizon H3(69cm to 79cm)	Bedrock

#### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 14F - Klinesville-Berks channery silt loams, 30 to 65 percent slopes

#### Component: Klinesville (55%)

The Klinesville component makes up 55 percent of the map unit. Slopes are 30 to 65 percent. This component is on hills on uplands. The parent material consists of residuum weathered from shale and siltstone. Depth to a root restrictive layer, bedrock, lithic, is 10 to 20 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria.

#### Component: Berks (35%)

The Berks component makes up 35 percent of the map unit. Slopes are 30 to 65 percent. This component is on hills on uplands. The parent material consists of residuum weathered from shale and siltstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria.

### Map Unit 17 (2.99%)

Map Unit Name:	Lindside-Nolin silt loams
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	69cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

### Lindside(55%)

horizon H1(0cm to 25cm)	Silt loam
horizon H2(25cm to 97cm)	Silt loam
horizon H3(97cm to 152cm)	Silt loam

### Nolin(40%)

horizon H1(0cm to 18cm)	Silt loam
horizon H2(18cm to 97cm)	Silt loam
horizon H3(97cm to 152cm)	Silty clay loam

#### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 17 - Lindside-Nolin silt loams

#### Component: Lindside (55%)

The Lindside component makes up 55 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains on valleys. The parent material consists of alluvium derived from limestone, sandstone, and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is

## Soil Information

moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is low. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 27 inches during January, February, March, April, December. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.

### Component: Nolin (40%)

The Nolin component makes up 40 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains on valleys. The parent material consists of alluvium derived from limestone, sandstone, and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 54 inches during January, February, March, April, May, December. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 4w. This soil does not meet hydric criteria.

### Component: Dunning (3%)

Generated brief soil descriptions are created for major components. The Dunning soil is a minor component.

---

### Map Unit 1C (4.89%)

Map Unit Name:	Berks-Gilpin complex, 7 to 15 percent slopes
Bedrock Depth - Min:	58cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

#### Berks(50%)

horizon H1(0cm to 18cm)	Channery silt loam
horizon H2(18cm to 69cm)	Very channery silt loam
horizon H3(69cm to 79cm)	Bedrock

#### Gilpin(40%)

horizon H1(0cm to 10cm)	Silt loam
horizon H2(10cm to 58cm)	Silty clay loam
horizon H3(58cm to 68cm)	Bedrock

### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 1C - Berks-Gilpin complex, 7 to 15 percent slopes

### Component: Berks (50%)

The Berks component makes up 50 percent of the map unit. Slopes are 7 to 15 percent. This component is on mountains on uplands. The parent material consists of residuum weathered from shale and siltstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria.

### Component: Gilpin (40%)

The Gilpin component makes up 40 percent of the map unit. Slopes are 7 to 15 percent. This component is on mountains on uplands. The parent material consists of residuum weathered from shale and siltstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria.

---

### Map Unit 1F (60.88%)

Map Unit Name:	Berks-Gilpin complex, 35 to 65 percent slopes
----------------	---

## Soil Information

Bedrock Depth - Min:	58cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

### Berks(50%)

horizon H1(0cm to 18cm)	Channery silt loam
horizon H2(18cm to 69cm)	Very channery silt loam
horizon H3(69cm to 79cm)	Bedrock

### Gilpin(40%)

horizon H1(0cm to 10cm)	Silt loam
horizon H2(10cm to 58cm)	Silty clay loam
horizon H3(58cm to 68cm)	Bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 1F - Berks-Gilpin complex, 35 to 65 percent slopes

### Component: Berks (50%)

The Berks component makes up 50 percent of the map unit. Slopes are 35 to 65 percent. This component is on mountains on uplands. The parent material consists of residuum weathered from shale and siltstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria.

### Component: Gilpin (40%)

The Gilpin component makes up 40 percent of the map unit. Slopes are 35 to 65 percent. This component is on mountains on uplands. The parent material consists of residuum weathered from shale and siltstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria.

### Map Unit 22C (0.1%)

Map Unit Name:	Monongahela silt loam, 7 to 15 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	69cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

### Monongahela(90%)

horizon H1(0cm to 18cm)	Silt loam
horizon H2(18cm to 58cm)	Silt loam
horizon H3(58cm to 117cm)	Gravelly silt loam
horizon H4(117cm to 152cm)	Silt loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 22C - Monongahela silt loam, 7 to 15 percent slopes

## Soil Information

Component: Monongahela (90%)

The Monongahela component makes up 90 percent of the map unit. Slopes are 7 to 15 percent. This component is on fans on hills, hillslopes on hills, drainageways on hills. The parent material consists of colluvium derived from sandstone and siltstone and shale. Depth to a root restrictive layer, fragipan, is 18 to 36 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 27 inches during January, February, March, April, December. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria.

### Map Unit 34 (0.15%)

Map Unit Name: Wheeling sandy loam

Bedrock Depth - Min: null

Watertable Depth - Annual Min: null

Drainage Class - Dominant: Well drained

Hydrologic Group - Dominant: B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Wheeling(95%)

horizon H1(0cm to 25cm)	Sandy loam
horizon H2(25cm to 132cm)	Sandy clay loam
horizon H3(132cm to 152cm)	Gravelly sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 34 - Wheeling sandy loam

Component: Wheeling (95%)

The Wheeling component makes up 95 percent of the map unit. Slopes are 0 to 2 percent. This component is on stream terraces on river valleys. The parent material consists of mixed alluvium derived from igneous, metamorphic and sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 1. This soil does not meet hydric criteria.

## **Federal Sources**

### **FEMA National Flood Hazard Layer**

**FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

### **Indoor Radon Data**

**INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

### **Public Water Systems Violations and Enforcement Data**

**PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SDWIS may correspond either with the physical location of the water system, or with a contact address.

### **Radon Zone Level**

**RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

### **Safe Drinking Water Information System (SDWIS)**

**SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

### **Soil Survey Geographic database**

**SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

### **U.S. Fish & Wildlife Service Wetland Data**

**US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

### **USGS Current Topo**

**US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

### **USGS Geology**

**US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

### **USGS National Water Information System**

**FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

## **State Sources**

### **Oil and Gas Wells**

**OGW**

Oil and Gas Wells Data made available by Virginia Department of Mines Minerals and Energy maintained

## Asbestos Inspection Report

### Project Location:

1 Magnox Drive  
Pulaski, Virginia

### Prepared For:

The Town of Pulaski  
P.O. Box 660  
Pulaski, VA 24301

### Prepared By:

---

Fred Danner  
Asbestos Inspector

## TABLE OF CONTENTS

### SCOPE OF WORK

### ASBESTOS INSPECTION

- SAMPLE SUMMARY
- LABORATORY REPORT
- PHOTOS
- APPLICABLE LICENSES

## SCOPE OF WORK

HDH Technical, Inc. was contracted by The Town of Pulaski to provide an asbestos inspection at the structure located at 1 Magnox Drive, Pulaski, Virginia. The inspection was conducted by personnel trained and licensed in accordance with the regulations of the Environmental Protection Agency (EPA) and the Commonwealth of Virginia. This inspection was performed using current EPA AHERA standards. This protocol was used for the determination, sampling and analysis of suspected Asbestos Containing Materials (ACM).

## ASBESTOS INSPECTION

An inspection of the structure at 1 Magnox Drive was performed September 17, 2019 by representatives of HDHT. The objective of this inspection was to determine the location of suspect asbestos-containing materials (ACM) currently located on the interior or exterior of this structure that may be disturbed by upcoming demolition activities. Only the front portion of the structure was inspected. The exact parameters of the survey are indicated in the photo section contained in this report.

As the sample summary indicates, the following suspect materials sampled were reported to be asbestos containing by the laboratory:

- **AirCell Pipe Insulation located in the crawlspace. This material may also be found inside walls and in chases.**
  - **THIS MATERIAL IS FRIABLE**
  - **THIS MATERIAL IS A HIGH CONTENT ACM**
- **Mudded Elbow Insulation located in the crawlspace. This material may also be found inside walls and in chases.**
  - **THIS MATERIAL IS FRIABLE**
  - **THIS MATERIAL IS A HIGH CONTENT ACM**

These NON-Friable / Friable asbestos containing materials should be removed prior to demolition activities at this location. Removal should be performed by licensed, contract personnel using approved methods.

**For informational purposes, the following suspect material was reported to contain asbestos at < 1%. Although not considered an Asbestos Containing Material (> 1%), this information should be provided to all contract personnel prior to restoration/demolition activities for their use in meeting current OSHA requirements pertaining to personnel disturbing this material:**

- **Gasket between modern downspouts and cast iron receiver downspouts.**

*Friable Asbestos Material:* Material when dry, may be crumbled, pulverized or reduced to powder by hand pressure and includes previously non-friable material after such previously non-friable material becomes damaged to the extent that when dry is may be crumbled, pulverized, or reduced to powder by hand pressure.

*Non-friable Asbestos Material:* Material that contains asbestos in which the fibers have been locked in by a bonding agent, coating, binder, or other material so that the asbestos is well bound and will not release fibers during any appropriate use, handling, demolition, storage, transportation, processing or disposal.

This information should be provided to all contract personnel for their use in meeting current OSHA requirements. Every attempt was made to gain access to all areas or to assess representative materials entering or leaving the area. HDH Technical, Inc. accepts no liability nor makes any claims regarding ACBM which was not accessible during the inspection process if such material was located behind or within walls, concrete decks, subfloors, or was generally inaccessible without destructive sampling. If any additional suspect materials are identified during the course of the project, the contractor is to immediately stop work and contact the Owner for further direction.

---

### Disclaimer

The final report cannot be reproduced, except in full, without written authorization from SanAir. Fibers smaller than 5 microns cannot be seen with this method due to scope limitations. The accuracy of the results is dependent upon the client's sampling procedure and information provided to the laboratory by the client. SanAir assumes no responsibility for the sampling procedure and will provide evaluation reports based solely on the sample and information provided by the client. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Samples are held for a period of 60 days.

For NY state samples, method EPA 600/M4-82-020 is performed.

Polarized- light microscopy is not consistently reliable in detecting asbestos in floor covering and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.

Dear Fred Danner,

We at SanAir would like to thank you for the work you recently submitted. The 45 sample(s) were received on Wednesday, September 18, 2019 via FedEx. The final report(s) is enclosed for the following sample(s): SC 1.1, SC 1.2, SC 1.3, BC 2.1, BC 2.2, BC 2.3, CT 3.1, CT 3.2, CT 3.3, SR 4.1, SR 4.2, SR 4.3, JC 5.1, JC 5.2, JC 5.3, EM 6.1, EM 6.2, EM 6.3, PI 7.1, FT 8.1, FT 8.2, TM 9.1, TM 9.2, FT 10.1, FT 10.2, TM 11.1, TM 11.2, DF 12.1, DF 12.2, FM 13.1, FM 13.2, DF 14.1, DF 14.2, WF 15.1, WF 15.2, PG 16.1, PG 16.2, CK 17.1, CK 17.2, DF 18.1, DF 18.2, SC 19.1, SC 19.2, SC 20.1, SC 20.2.

These results only pertain to this job and should not be used in the interpretation of any other job. This report is only complete in its entirety. Refer to the listing below of the pages included in a complete final report.

Sincerely,

Sandra Sobrino  
Asbestos & Materials Laboratory Manager  
SanAir Technologies Laboratory

**Final Report Includes:**

- Cover Letter
- Analysis Pages
- Disclaimers and Additional Information

**Sample conditions:**

- 45 samples in Good condition.

## Photos

## 1 Magnox Drive

Only the section indicated by the green box above was surveyed.  
This report does not include the portion of the building inside the  
red box.

## 1 Magnox Drive

The Thermal System Insulation, located in the crawl space of the building, was found to be Asbestos Containing by the laboratory. This includes AirCell Pipe Insulation and Mudded Elbow Insulation.

**THESE MATERIALS ARE FRIABLE**

**THESE MATERIALS ARE HIGH CONTENT ACMs.**

**THESE MATERIALS ARE DAMAGED AND MAY CONTAMINATE THE GROUND IN AREAS WHERE THEY ARE LOCATED.**

## 1 Magnox Drive

For informational purposes, the gasket indicated above was reported to contain asbestos at  $< 1\%$ .

The material is a gasket between modern metal downspouts and cast iron downspouts.

Although not considered an Asbestos Containing Material ( $> 1\%$ ), this information should be provided to all contract personnel prior to restoration/demolition activities for their use in meeting current OSHA requirements pertaining to personnel disturbing this material.

## Scope of Work

HDH Technical, Inc. was contracted by The Town of Pulaski to provide an asbestos inspection and lead-based paint screening at 1 Magnox Drive, Pulaski, Virginia. The front portion of this structure was previously inspected for Asbestos. This report details the Lead Based Paint inspection for the entire structure, as well as the Asbestos Inspection for the rear portion of the structure. The inspection was conducted by personnel trained and licensed in accordance with the regulations of the Environmental Protection Agency (EPA) and the Commonwealth of Virginia. This inspection was performed using current EPA AHERA standards. This protocol was used for the determination, sampling and analysis of suspected Asbestos Containing Materials (ACM). Only those parts of the structure scheduled to undergo renovation, as directed by the client, were included in this inspection.

Also included in this report is a Lead-Based Paint Screening at this location. The term "screening" is used as opposed to "inspection" due to the fact that a complete HUD type paint inspection of each surface in every space was not performed. Generally speaking, each differing type of interior and exterior component and each differing type of paint was tested, although each component was not tested in each room. This "screening" will be referred to as an "inspection" throughout this report and was conducted in accordance with accepted industry standards and applicable regulations established by OSHA and the EPA. This inspection only identifies lead-based paint that is accessible through non-destructive methods. It does not identify lead-based paint materials located within walls, concrete decks, subfloors, or other generally inaccessible areas.

---

## ASBESTOS INSPECTION

An inspection of 1 Magnox Drive was performed on March 3, 2020 by representatives of HDHT. The objective of this inspection was to determine the location of asbestos-containing building materials (ACBM) currently located on the interior of the rear portion of this structure that may be disturbed in conjunction with upcoming renovation activities at specified locations in this structure.

The inspection was conducted by personnel trained and licensed in accordance with the regulations of the Environmental Protection Agency (EPA) and the Commonwealth of Virginia. This inspection meets the protocol outlined in current EPA AHERA regulations. This protocol was used for the determination, sampling and analysis of suspect asbestos containing materials.

**As the sample summary indicates, None of the suspect materials sampled in this portion of the structure were reported to be asbestos containing by the laboratory.**

This information should be provided to all contract personnel for their use in meeting current OSHA requirements. Every attempt was made to gain access to all areas or to assess representative materials entering or leaving the area. HDH Technical, Inc. accepts no liability nor makes any claims regarding ACBM which was not accessible during the inspection process if such material was located behind or within walls, concrete decks, subfloors, or was generally inaccessible without destructive sampling. If any additional suspect materials are identified during the course of the project, the contractor is to immediately stop work and contact the Owner for further direction.

---

### **Disclaimer**

The final report cannot be reproduced, except in full, without written authorization from SanAir. Fibers smaller than 5 microns cannot be seen with this method due to scope limitations. The accuracy of the results is dependent upon the client's sampling procedure and information provided to the laboratory by the client. SanAir assumes no responsibility for the sampling procedure and will provide evaluation reports based solely on the sample and information provided by the client. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Samples are held for a period of 60 days.

For NY state samples, method EPA 600/M4-82-020 is performed.

Polarized- light microscopy is not consistently reliable in detecting asbestos in floor covering and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.

Dear Robin Liebal,

We at SanAir would like to thank you for the work you recently submitted. The 22 sample(s) were received on Wednesday, March 04, 2020 via FedEx. The final report(s) is enclosed for the following sample(s): WG-21.1, WG-21.2, SP-22.1, SP-22.2, SP-22.3, BP-23.1, BP-23.2, BP-23.3, VD-24.1, VD-24.2, FT-25.1, FT-25.2, BM-26.1, BM-26.2, SR-27.1, SR-27.2, JC-28.1, JC-28.2, CT-29.1, CT-29.2, BM-30.1, BM-30.2.

These results only pertain to this job and should not be used in the interpretation of any other job. This report is only complete in its entirety. Refer to the listing below of the pages included in a complete final report.

Sincerely,

A handwritten signature in black ink that reads "Sandra Sobrino". The signature is written in a cursive, flowing style.

Sandra Sobrino  
Asbestos & Materials Laboratory Manager  
SanAir Technologies Laboratory

**Final Report Includes:**

- Cover Letter
- Analysis Pages
- Disclaimers and Additional Information

**Sample conditions:**

- 22 samples in Good condition.

---

## LEAD INSPECTION

On March 3, 2020 a Lead-Based Paint inspection was also conducted at 1 Magnox Drive. The inspection was conducted to identify potential lead-based paint concerns involved in this renovation project. The areas were inspected by Fred Danner. The side of the structure with the main entrance is referred to as side "A". Sides "B", "C" and "D" follow clockwise around the structure.

**The inspection determined that the following surfaces tested contain lead greater than or equal to 1.0 mg/cm, and are considered to be lead-based paint surfaces as defined by the Virginia Department of Professional and Occupational Regulation (DPOR) and the Environmental Protection Agency (EPA):**

- **Inner Door Alcove Wall – Front Door**
- **Door Casing – Front Door**
- **Wooden Soffit Components**
- **Wooden Fascia Components**
- **Original Metal Framed Windows**
- **Coating on Copper Roof Panels**

**If lead is present, regardless of quantity, OSHA regulations are applicable.** All persons involved in the disturbance of lead based or lead containing painted surfaces should be adequately trained to do so. All contractors should be provided with the results for their use in meeting current OSHA requirements for the protection of their workers and the environment.

This inspection was in compliance with the Virginia Lead-based Paint Activities Regulations, October 1, 1995. The Inspector is properly trained, licensed, and met the competency requirements spelled out in those regulations.

## FIELD VERIFICATION

Fred Danner, interim licensed lead-based paint inspector, under the direction of Robin H. Liebal, inspected the structure on March 3, 2020.

A total of Sixty-Seven (67) X-Ray Florescence (XRF) readings, including calibrations, were taken in substantial conformance with industry standards and other applicable federal and state regulations.

Robin H. Liebal's Virginia Lead Risk Assessor license number is 3356000422.

**A complete copy of all tested surfaces and results are included in this report. All positive samples are listed in BOLD.**

HDH Technical, Inc. (HDHT) used the Heuresis Corporation model Pb200i (Serial#1609) X-Ray Fluorescence (XRF) instrument for the screening. This unit was sourced in July, 2017

---

operated in the K&L test mode using the rules and procedures found in the Performance Characteristic Sheet for the Heuresis Corporation model Pb200i. The instrument is not substrate dependant according to that performance characteristic sheet, so no substrate corrections were required during this screening.

The XRF was calibrated prior to use and at the end of the testing, or every four hours, whichever came first. All calibrations were conducted on a  $1.10 \pm 0.1$  mg/cm<sup>2</sup> NIST SRM paint film. All calibrations are noted on the x-ray fluorescence data sheets.

For the purposes of this inspection lead-based paint is defined as greater than or equal to 1.0 mg/cm<sup>2</sup>. The Heuresis Corporation instrument (model Pb200i) used in this survey have published threshold values of 1.0 mg/cm<sup>2</sup> on all substrates and do not require substrate correction. Paint chip confirmation of inconclusive samples was not necessary since no inconclusive surfaces were identified during sampling with this X-ray Fluorescence Analyzer. Lastly, this report detailing the findings of the inspection report was written to document the inspection and provide a permanent record of the evaluation.

## **Qualifications**

The inspection was conducted by Fred Danner, interim lead inspector, under the direction of Robin H. Liebal, Licensed Lead Risk Assessor #3356000422. The inspection was conducted in accordance with applicable Local, State, and Federal regulations.

## **Methodologies**

This inspection was conducted in accordance with accepted industry standards and applicable regulations established by OSHA and the EPA. This inspection only identifies lead-based paint that is accessible through non-destructive methods. It does not identify lead-based paint materials located within walls, concrete decks, subfloors, or other generally inaccessible areas.

## **Disclaimer**

This inspection report is written for and intended for the use of the Owner and its representatives only. HDHT is not responsible nor will be held liable for any interpretation made, opinions formed, or conclusions drawn by any third party as a result of examining the lab results, inspection results or this report. Any interpretations, opinions, and conclusions will be those made, formed, and drawn solely by that third party.

A lead inspector/risk assessor properly trained by a training institution utilizing an approved HUD curriculum and subsequently licensed to perform inspections by the Commonwealth of Virginia performed the inspection of this structure. HDHT accepts no liability nor makes any claims regarding lead based painted surfaces which were not tested and lead -based painted surfaces which were not accessible during the inspection process if such material was located behind or within walls, concrete decks, sub-floors, chases, or was otherwise generally inaccessible without destructive sampling.

---

**QUALIFICATIONS OF ENVIRONMENTAL**  
**PROFESSIONALS**

## Ryan L. Sadler

### Environmental Scientist

*Mr. Sadler has utilized his multi-faceted experience on numerous Civil Engineering projects for counties, municipalities, and private enterprise. He has recently completed projects in Harnett, Johnston, Carteret, Craven, Catawba, and Madison Counties overseeing the construction administration of multiple construction projects for clients. Mr. Sadler has been responsible for the generation of multiple Preliminary Engineering Reports and Environmental Assessments while assisting with the obtaining of grant funds for municipal utility and capital improvement projects.*

7 years with the firm  
16 years of experience

#### Education

- B.S./2000/ Env Science Policy and Admin /North Carolina State University

#### Professional Registration(s)

- Manager of Landfill Operations Certification #96545 (Solid Waste Association of North America)
- American Concrete Institute (ACI) Level 1
- Nuclear Radiation Safety Training

#### Areas of Expertise

- Regulatory Compliance
- Engineering for Local Government and Industry
- Landfills, Transfer Stations, and Materials Recovery Facilities
- Phase I & II ESAs

**USDA-RD Environmental Report, University of Mount Olive:** Performed an environmental review with report for new student living center at the University of Mount Olive in Mount Olive, NC.

**USDA-RD Environmental Report, University of Mount Olive:** Performed an environmental review with report for new academic administration center at the University of Mount Olive in Mount Olive, NC.

**Phase I ESA - 217 & 219 Raleigh Street, Holly Springs, NC:** Performed a Phase I ESA for two adjoining residential parcels consisting of approximately 5 acres in the Town of Holly Springs, NC.

**Phase I ESA - West Industry Drive, Oxford, NC:** Performed a Phase I ESA for a 3-Acre commercial development project in the Town of Oxford, NC.

**Brownfields Projects, Industrial Development Authority of Halifax County, VA:** Multiple Phase I & Phase II ESAs for commercial sites under a USEPA Brownfields Assessment Grant.

**Brownfields Projects, City of Martinsville, VA:** Multiple Phase I & Phase II ESAs for commercial sites under a USEPA Brownfields Assessment Grant.

**Brownfields Projects, Lynchburg Economic Development Authority, Lynchburg, VA:** Multiple Phase I & Phase II ESAs for commercial sites under a USEPA Brownfields Assessment Grant.

**Brownfields Projects, Town of Princeton, NC:** Multiple Phase I & Phase II ESAs for commercial sites under a USEPA Brownfields Assessment Grant.

## Janet C. Frazier

### Senior Environmental Scientist/Environmental Program Manager II

*Ms. Frazier's experience in environmental consulting includes conducting environmental assessments (i.e., Due diligence/Phase I/Phase II ESAs) to support pre-acquisition property transfers. She has extensive experience in database management, data validation and data quality assurance/quality control planning.*

Associate; Program Manager  
28 years with the firm  
31 years of experience

#### Education

- B.S./1987/Biochemistry/  
Virginia Tech

#### Continuing Education

- NAEP Conference, Durham, NC - 2017
- Central Appalachian Region Brownfields Summit - April 2018
- USEPA – National 2017 Brownfields Conference
- Vapor Intrusion Regulatory Updates
- Issues and Options in Human Health Risk Assessment - A Resource When Alternatives to Default Parameters and Scenarios are Proposed -2018

#### Areas of Expertise

- Brownfields
- Phase I and Phase II Environmental Site Assessments
- Sampling and Analysis Plans
- Data Quality Assurance Planning

*As a senior associate with the firm and program manager, she is responsible for project design, sample collection, analysis and reporting for a broad range of environmental projects. Her work also includes environmental compliance assistance to the public and private sector for projects administered under CAA, CWA, FIFRA, EPCRA, RCRA, CERCLA and state regulatory programs.*

**Brownfields Environmental Consulting Services, City of Roanoke, VA:** Project Manager. City-wide hazardous substances, dry cleaners and UST inventory, Phase I and Phase II Environmental Site Assessments (ESA) of brownfields sites in the City (USEPA's Brownfield Grants).

**Brownfields Project, Town of Pulaski, VA:** Senior Environmental Scientist. Phase I and Phase II ESA, including sampling and analysis plan (SAP) of brownfield sites for the Town of Pulaski under USEPA's Brownfield Assessment Grant.

**Brownfields Property Redevelopment, City of Bristol, VA:** Data Quality Assurance Manager. Phase I and Phase II ESA under the City's Targeted Brownfields Assessment Program for a former industrial/warehouse building site.

**Brownfields Project, Town of Hurt, VA:** Phase I ESA and Phase II ESA planning for industrial site under a VDEQ Brownfields Grant.

**Phase I and Phase II Environmental Site Assessments (ESA):** Conducted hundreds of Phase I ESAs since 1990 for municipal, industrial and commercial clients in the Pacific Northwest, Virginia, North Carolina, and Tennessee. Managed and conducted Phase II ESAs to assess soil and groundwater conditions. Work included coordination and assisting in the evaluation of corrective action measures. Work also included assessment for potential radon, lead-based paint, and wetlands.

## Carrie N. Blankenship, PG

### Project Geologist

*Ms. Blankenship provides many aspects of environmental services including groundwater monitoring, surface water, and soil sampling and evaluation. Ms. Blankenship is active in developing and implementing groundwater corrective action programs for solid waste management facilities. Groundwater monitoring well placement and drilling based on groundwater flow and geologic evaluations are also important duties related to Ms. Blankenship's responsibilities. Ms. Blankenship is also actively involved in water supply planning in Virginia.*

13 years with the firm  
16 years of experience

### Office Location

Blacksburg, VA

### Education

- MS/2004/Environmental and Engineering Geology/Radford University
- BS/2001/Geology/Virginia Tech

### Professional Registration

- Professional Geologist/2008/VA, NC

### Areas of Expertise

- Water supply planning and development
- Groundwater monitoring programs for solid waste management facilities
- Soil and groundwater assessment and remediation

**Numerous Regional Water Supply Planning Projects:** Project Manager. Working with the following regional commissions to collect available existing water supply information and water use data, prepare demand projections and drought response and contingency plans, and coordinate and facilitate public involvement to prepare a Regional Water Supply Plan matching the requirements of 9 VAC 25-780:

- Roanoke Valley-Alleghany Regional Commission (13 jurisdictions)
- Northern Virginia Regional Commission (14 jurisdictions)
- West Piedmont Planning District (10 jurisdictions)
- Mount Rogers Planning District (10 jurisdictions)
- Virginia's Region 2000 Local Government Council (12 jurisdictions)

**Groundwater Program, Montgomery County, VA:** Manages groundwater monitoring program for the Closed Ballfields landfill. Installed monitoring wells for nature and extent study to evaluate extent of groundwater impact in support of risk assessment and corrective action. (Ongoing)

**Augusta County Service Authority:** Manages groundwater monitoring programs for closed and active landfills in accordance with Virginia Solid Waste Management regulations. Completed Alternate Source Demonstration for naturally occurring metals.

**Stormwater Project, Titan America/Roanoke Cement Company, LLC, Troutville, VA:** Project Geologist. Stormwater work. Well abandonment.

**Groundwater Monitoring Program, Giles County, VA:** Manages groundwater monitoring program for closed municipal solid waste landfill in accordance with Virginia Solid Waste Management regulations. (Ongoing)

**Craig County, VA:** Managed groundwater monitoring program at closed municipal solid waste landfill. Completed Alternate Source Demonstration for naturally occurring metals. Prepared request for termination of post-closure care requirements. Terminated post-closure care. (2006)

**Engineering and Groundwater Monitoring/Corrective Action, City of Bristol Integrated Solid Waste Facility, Bristol, VA:** Manages groundwater monitoring program for the active quarry landfill and inactive landfill, developed a groundwater monitoring program work plan to address ongoing DEQ comments and other regulatory issues, corrective action planning and monitoring, and other applicable tasks. (Ongoing)

**Washington County, VA:** Manages groundwater monitoring program for closed landfill. Prepared request for termination of post-closure groundwater monitoring requirements. (ongoing)

**Engineering and Groundwater Monitoring/Corrective Action Services, Spotsylvania County, VA:** Project Geologist for the County's Berkeley, Chancellor, and Livingston Landfills; managed and executed various aspects of each project including meeting groundwater monitoring program requirements, addressed DEQ comments and other regulatory issues; performed environmental impact characterizations, technology assessments, risk assessment, corrective action planning and design, surface water monitoring, and other applicable tasks. (Ongoing)

**Engineering and Environmental Monitoring, Carroll Grayson Galax Regional Solid Waste Authority, Hillsville, VA:** Manages groundwater monitoring programs for closed and active landfills in accordance with Virginia Solid Waste Management regulations. Completed soil evaluation to determine soil and overburden availability for use as daily cover. (Ongoing)

**Brownfields Project, City of Lynchburg, VA:** Project Geologist. Phase II ESA, including the development, implementation and fieldwork for a sampling and analysis plan (SAP) of a brownfields site for the City.

**Brownfields Project, City of Martinsville, VA:** Project Geologist. Phase II ESA, including the development, implementation and fieldwork for a sampling and analysis plan (SAP) of a brownfields site for the City.

**Karst/ Subsurface Void Evaluation, Washington & Lee University, Lexington, VA:** Project Geologist. Completed a site visit and screening level evaluation of potential subsurface voids identified under a building. Provided an opinion on the viability of engineered remediation solutions to address the apparent voids and overall compromised building integrity. The viability of new building construction onsite was also evaluated.

## Candy E. Elliott, P.G.

### Staff Geologist

10 years of experience

#### Education

- B.S. / 2005 /  
Geology / University  
of North Carolina
- M. S. / 2007 /  
Geophysics / New  
Mexico Institute of  
Mining and  
Technology

#### Certifications

- Licensed Geologist:  
NC, SC, AR, FL
- OSHA 40-Hour  
HAZWOPER  
Training with annual  
updates
- First Aid/CPR/AED
- Certified UVF  
Mobile Lab  
technician

#### Affiliations

- North Carolina  
Geological Society
- Groundwater  
Professionals of  
North Carolina

*Ms. Elliott is a North Carolina, South Carolina, Florida, and Arkansas licensed geologist with ten years of experience in the environmental industry. Her recent projects include soil and groundwater assessment at chlorinated solvent sites using assessment tools such as HPT, MiHPT and CPTu, landfill assessment including surface water, groundwater, soil and landfill gas assessment. She is well versed in anaerobic bioremediation, and in interpreting laboratory data essential to evaluating bioremediation performance. She has worked on numerous underground storage tank sites, with experience ranging from initial assessment to remediation. She worked closely with the North Carolina Department of Environmental Quality Underground Storage Tank Section, the Inactive Hazardous Sites Branch, and the Pre-Regulatory Landfill Group. She is proficient in data reduction and analysis, and several software packages. She has been trained in several field techniques, including ultra-violet fluorescent hydrocarbon analysis, low flow groundwater sampling, soil sampling, sediment sampling, landfill gas sampling, soil vapor sampling, sub-slab and indoor air sampling, as well as other related techniques. She has attended training sessions on vapor intrusion through the ITRC, and is knowledgeable in the most current EPA and North Carolina Vapor Intrusion Guidelines. She has recently completed a course on Monitored Natural Attenuation. She has solid working knowledge of the statistical tools used to evaluate contaminant concentration trends.*

**Soil and Groundwater Assessments, Multiple Sites.** Led field staff performing soil and groundwater sampling for sites in California, Nevada, and North Carolina.

**Groundwater Monitoring Well and Extraction Well Installation, Multiple Sites.** Oversaw field operations for the installation of wells using a variety of drilling techniques, including hollow stem auger, direct push, sonic, and mud rotary.

**Site Assessment, Multiple Sites.** Coordinated and oversaw initial and subsequent site assessments in North Carolina, South Carolina, Florida, and Arkansas, focusing on soil, groundwater, and soil gas; assisted in geophysical data collection and interpretation for NCDEQ and NCDOT sites.

**Soil Vapor Assessment, Multiple Sites.** Conducted soil vapor assessments using both passive and active methods in California, North Carolina, and South Carolina; Data analysis using EPA OSWER tools, based upon Johnson and Ettinger models; created a field protocol for vapor intrusion assessment.

**Sub-slab and Indoor Air Sampling, Multiple Sites.** Conducted sub-slab and indoor air sampling at industrial, commercial, and residential sites in California and North Carolina.

**Landfill gas probe installation, Multiple Sites.** Oversaw the installation of landfill gas probes at active and inactive landfills.

**Pre-regulatory landfill assessment, Multiple Sites.** Directed field efforts for waste delineation using geophysical methods; assessed soil, groundwater, surface water, and sediment at sites in North Carolina.

**Brownfields Assessments, Multiple Sites.** Assisted in identifying and assessing environmental concerns at potential Brownfields sites, and assisted in preparing applications for the Brownfields Program in North Carolina; Sites included are in Raleigh, Durham, Greenville, Enfield, Wilson, and Morehead City, North Carolina.

**Underground Storage Tank Closure, Multiple Sites.** Coordinated and oversaw closure of underground storage tanks by removal and closure in place. Performed confirmatory soil sampling, and subsequent assessment if required; prepared and submitted appropriate forms and reports; used field UVF laboratory for hydrocarbon assessment at North Carolina Department of Transportation and for private clients.

**Long-term groundwater quality monitoring and reporting, Multiple Sites.** Created sampling and analysis plans, coordinated sampling events, and oversaw field events; compiled data and reported to clients and appropriate regulatory agencies.

**Slug Tests and Pumping Tests, Multiple Sites.** Performed slug testing at sites in North Carolina and Florida, including a coal ash plant site; performed pumping tests in California and North Carolina. Performed data analysis to evaluated effective porosity.
